CITY MANAGER

- **2016 Film Permit Activity Summary:** In 2016, Staff issued fifty-four (59) permits for one hundred seventeen (117) shooting days in the City, and collected more than \$85,000 in related film permit and business license fees. The table below compares film permit activity in 2016 and 2015. It should be noted that 2015 was a record high year for film permits, but the relative decreases noted during 2016 are generally still higher than the figures for 2014, thereby continuing a general upward trend over the past decade.

| | 2015 | 2016 | Δ |
|----------------------------------|--------------|-------------|----------|
| No. of Permits Issued | 59 | 54 | -8% |
| No. of Shooting Days | 112 | 117 | +4% |
| Total Fees Collected | \$116,427.00 | \$85,390.35 | -27% |
| Average Days/Permit | 1.90 | 2.17 | +14% |
| Average Fees/Permit | \$1,973.34 | \$1,581.30 | -20% |
| Average Fees/Shooting Day | \$1,039.53 | \$729.83 | -30% |

Staff is optimistic that Rancho Palos Verdes will remain a competitive and attractive option for location filming in Los Angeles County in the coming year. Although Staff encourages location film production as a source of revenue and in support of an important regional industry, Staff’s first priority is always the protection of the quiet enjoyment of residents’ homes and neighborhoods.

- **Expanded Oriental Fruit Fly Eradication:** On December 20th, Staff received the attached notice from the California Department of Food and Agriculture (CDFA) regarding an expanded infestation of Oriental fruit flies (OFFs) in Wilmington and San Pedro (a similar notice affecting a smaller area of the City was received on November 8th). Although the notice is issued for Wilmington and San Pedro (where the OFFs were found), portions of several surrounding cities and communities are included within the eradication area, in accordance with CDFA eradication protocols. This includes all of the neighborhoods in the *Eastview* area; the neighborhoods along the east side of Palos Verdes Dr. E. between Palos Verdes Dr. N. and Palos Verdes Dr. S. (including Marymount California University); and the neighborhoods just north of Friendship Park and east of Miraleste Dr. A map of the expanded program area is included in the attached notice.

Questions about the OFF eradication program should be directed to CDFA at (800) 491-1899. Additional information is also available on-line at by clicking [here](#).

- **Advisory Board Recruitment (Vacancies – Traffic Safety Committee):** Staff is currently recruiting for three seats on the Traffic Safety Committee. Please see the attached Press Release regarding the recruitment. The Press Release has been sent to the Palos Verdes Peninsula News, Daily Breeze, and Los Angeles Times, and posted on the website, ListServe, Access Reader Board on Channel 35 and RPV TV Ch 33; as

well as the City's Facebook and Nextdoor sites. Notices were posted in various locations throughout the City. The deadline for applications to be filed in the City Clerk's Office is by 4:30 p.m. on Friday, January 27, 2017. Staff has tentatively reserved the 6:00 p.m. to 7:00 p.m. time frame prior to the February 7, 2017 meeting so that Council can conduct interviews of the applicants.

FINANCE

- CalPERS to Lower Discount Rate: On December 21, 2016, the CALPERS Board voted to lower the discount rate (its investment rate of return) from 7.5 percent to 7.0 percent over the next three (3) years. This timeframe will allow employers additional time to prepare for the changes to their contribution costs. Lowering the discount rate will increase both employers' annual pension costs and unfunded actuarial liabilities. The new discount rate for public agencies is scheduled to take effect July 1, 2018.

The changes to the discount rate will be as follows:

- *FY 2017-2018: 7.375%*
- *FY 2018-2019: 7.250%*
- *FY 2019-2020: 7.000%*

This step to reduce the discount rate to 7.0 percent is one of many actions taken by CalPERS over the past few years to reduce risk to the overall pension fund and ensure its long-term stability. Other actions taken include:

- *2013: Changing amortization and smoothing policies that spread rate increases or decreases over a five-year period.*
- *2014: Adopting new demographic assumptions that show retirees are living longer.*
- *2015: Approving a new funding risk mitigation policy to incrementally lower the discount rate during good economic times.*

For more information on this item, you can read the news bulletin released by CalPERS in its entirety [here](#).

PUBLIC WORKS

- Maintenance: Public Works Maintenance personnel responded to numerous issues over the holiday break, to include: Reported landslide on Crenshaw Blvd. at Silver Spur (RHE issue), numerous burglar and fire alarm issues, reported leaks, and storm damage.

The sport field at Hesse Park was vandalized on Christmas Eve by a vehicle which used the field to perform doughnuts. The maintenance vendor is remediating the damage by leveling the ruts and re-planting grass in the damaged areas.

- Storm Drain Deficiency Improvement Program FY 16-17: The design phase is well underway for the first year of the 10-year program outlined in the Master Plan of Drainage (MPD). The first set of design drawings and engineering documents have been submitted to staff for review. Staff will meet with the consultant in the next couple of weeks to discuss findings.
- Altamira Canyon Culvert Project: The design will include modifications to the Palos Verdes Drive South drainage culvert to effectively eliminate unauthorized access into the City culvert and provide for a maintainable drainage facility. Staff has met with the design consultant to review and discuss the first set of design drawings and engineering documents. The next progress submittal is expected at the end of January.
- Residential Street Rehabilitation Project for Area 7: The design will include roadway rehabilitation for Area 7 based on the Pavement Management Program suggestions. Staff has been using GIS innovation to streamline field data collection. Use of proprietary developments by in house staff has streamlined the data collection process and cut down the field time by about half! More efficiency translates into more cost savings.

Way to go team!

- Sunnyside Ridge Trail Improvements: Work this week included landscaping, installing new railroad tie slough walls, and installing new timber rails to establish the new horse trail. Planting is on schedule to be completed this week. The site is not yet open to the public and proper blockades will be put in place.

COMMUNITY DEVELOPMENT

- **Trump National - Coastal Commission-Approved Immaterial Amendment:** On December 21, 2016, the Coastal Commission approved an Immaterial Amendment to Trump's Coastal Permit to allow 66,720 square feet of habitat restoration and mitigation of coastal sage scrub that was temporarily impacted as part of the waterfall removal project. Attached is Coastal Commission's letter detailing the decision.
- **Green Hills Annual Compliance Review:** The Annual Compliance meeting will be conducted by the City Council at a special meeting at Hesse Park on January 31, 2017 at 6:30pm. Attached is the public notice that will be mailed to all property owners within the 500' radius and interested parties, published in the *Peninsula News*, and uploaded to the City's Green Hills webpage this Thursday. A list-serve message will also be released the same day.
- **Unpermitted Signs along Western Avenue:** At the November 15 and December 20, 2016 City Council meetings, Ms. Dorothea Flanigan raised concerns during public comments regarding what she felt were unpermitted and unsightly signs along Western Avenue. Soon after she spoke at the November 15th Council meeting, the City's Code Enforcement Officer began to investigate the alleged sign violations which involves identifying where the signs are located, as well as researching City records. Thus far, Staff has identified one sign on private property that may not have a permit and is violation of the City's Sign Ordinance (17.76.050 of the RPVMC). Staff also noted that many of the advertisements and signs are on bus stop benches in the public right-of-way and is working with Staff from Public Works to address this issue. Staff will update the City Council in future Weekly Administrative Reports.
- **Coco's Restaurant Update:** As previously reported, Code Enforcement staff contacted the new owners of the former Coco's Restaurant on Western Avenue regarding the condition of the property. The owners have painted over the graffiti and cleaned up the landscaping. Recently, Staff was informed that some of the tenants of the shopping center are complaining about homeless people sleeping on the property. Staff has contacted the Sheriff's Department regarding this issue, and has reiterated to the tenants that they need to call the Sheriff's Department whenever they see this type of problem. It should also be noted that the City is expecting a Conditional Use Permit application to be submitted within the next few weeks to convert the former Coco's Restaurant to a Chase Bank. Staff will report to the Council when the application is submitted to the Planning Division.
- **Peafowl Trapping Program – December 2016 Status Report:** The City's Peafowl Trapping Program is well underway. Twenty (20) peafowl were trapped and relocated in the month of December, bringing the total number of trapped and relocated peafowl at 113 to date. The trapping will continue until a total of 150 peafowl have been trapped and relocated.
- **Daily Breeze Article on the City's Peafowl Trapping Program:** On December 24, 2016, an article written by Mary Jo Hazard was published in the Daily Breeze on the City's

Peafowl Trapping Program. The article specifically focused on where the birds go after being trapped. As stated in the article, and as previously reported to the Council, the birds are relocated to private residences in areas such as San Diego and Ventura counties. The article is attached.

- House Fire on Littlebow Road: On December 17, 2016, the LA County Fire Department (Lomita Station) responded to a house fire at 5408 Littlebow Road. According to the Fire Department, the non-criminal structure fire was caused by a floor heater located in the west bedroom that had been left on while the residents were away. The damage is estimated at \$80,000 to the structure and \$50,000 in personal property. There were no reported injuries. The City's Building Inspector inspected the structure and found that the home had experienced extensive damage. Thus, the structure was posted as restricted access ("yellow tag") to allow for property retrieval, clean up, and construction once building permits are obtained. Staff contacted the property owners and offered to assist them through this process. Pursuant to Section 17.84.060(2) of the RPVMC, the damaged structure is allowed to be rebuilt in the same footprint and height, and Section 17.78.010(F) allows, among other things, that the City waive "any permit or application fee" provided that the homeowner demonstrates that their insurance policy does not cover said fees. Staff will be working closely with the property owner through the rebuild process.

- New State Building Codes Effective: With the arrival of the New Year, the latest versions of updated Building Codes became effective. These new codes contain the latest in building standards and apply to new projects for which plans are submitted on or after January 1, 2017. Projects for which plans were submitted prior to January 1, 2017 may utilize the previous 2013 California Building Codes. The Building Standards Commission has accepted the adoption ordinance with local modifications for filing. (See attached letter from the Building Standards Commission dated December 7, 2016).

ADMINISTRATIVE REPORT

January 4, 2017

Page 8

- Outdoor Dining Area at Burattino's on Western Ave: On October 13, 2016, the Planning Division approved a Site Plan Review request to allow for outdoor dining at Burattino Restaurant located at 29701 S. Western Ave. A recent site inspection (photos attached) found that the dining area consists of two tables, chairs and a portable umbrella. The Burattino Restaurant is opened daily from 11:00 a.m. to 9:00 p.m. and provides a wide assortment of menu items including artisan pizzas, custom sandwiches and salads. The restaurant provides both dine-in and delivery dining options.

- Planning Division Monthly Activity: Attached is the Planning Division's Monthly Activity Report for December 2016. The report contains a brief summary of the Division's activities during this last month regarding: 1) New applications received; 2) Staff, Director, Planning Commission and City Council decisions rendered; and 3) Number of decisions made, including median processing time. As indicated in the report, the division received 30 new applications during the month and took action on 29 submitted applications.
- View Restoration/Preservation Applications Monthly Activity: Attached is the View Restoration Division's Monthly Activity Report for December 2016. The report contains: 1) A brief summary of the Division's activities during this last month; 2) A summary of pre-application meetings; 3) A summary of cases resolved by mediation; and 4) A summary of the Division's activities year-to-date. The Division received 1 new applications in the month of December 2016.
- Right-of-Way Permit Monthly Activity: Attached is the Right of Way Permit Monthly Activity Report for December 2016. The Department issued 1 right of-way permit.
- Code Enforcement Division Monthly Activity: Attached is the Code Enforcement Division's Monthly Activity Report for December 2016. The report contains: 1) A brief summary of the Division's activities during this last month; 2) A summary of sign

ADMINISTRATIVE REPORT

January 4, 2017

Page 9

abatement activity; and 3) Number of cases closed including median processing time. As indicated in the report, the Division conducted 33 field inspections and brought 13 cases to closure.

- Building and Safety Division Monthly Activity: Attached is the Building and Safety Division's Monthly Activity Report for December 2016. The report provides information on: 1) The types and number of permits issued; 2) The number of plan checks performed; 3) The number of inspections performed; and 4) The total amount of fees collected. Each of these items is compared to the activities during the same month of the previous year. In addition, a comparison of the activities for this fiscal year to those of the previous year is also provided. As shown on the report, the Division issued 98 permits during the month of December 2016.
- PC Agenda: Attached is the draft agenda for the Planning Commission meeting on Tuesday, January 10, 2017.
- Applications of Note: See attached table with a summary of the Applications of Note that were submitted to the department between Wednesday, December 28, 2016 and Tuesday, January 3, 2017.

CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE

OFFICIAL NOTICE FOR THE COMMUNITIES OF SAN PEDRO AND WILMINGTON PLEASE READ IMMEDIATELY

AMENDMENT TO THE NOTICE OF TREATMENT FOR THE ORIENTAL FRUIT FLY

Between September 29 and December 14, 2016, four male and one female oriental fruit flies (OFFs), *Bactrocera dorsalis* (Hendel) group, were trapped in the communities of San Pedro and Wilmington, Los Angeles County. Based on the survey data, pest biology, information from the California Department of Food and Agriculture (CDFA) *Bactrocera* Science Advisory Panel (BacSAP), recommendations provided by the CDFA Primary State Entomologist, and the CDFA "Action Plan for Methyl Eugenol Attracted Fruit Flies including Oriental Fruit Fly *Bactrocera dorsalis* (Hendel)," the CDFA concludes that an infestation of OFF exists in the area.

A Program Environmental Impact Report (PEIR) has been certified which analyzes the OFF treatment program in accordance with Public Resources Code, Sections 21000 et seq. The PEIR is available at <http://www.cdfa.ca.gov/plant/peir/>. The treatment activities described below are consistent with the PEIR.

In accordance with integrated pest management principles, the CDFA has evaluated possible eradication methods and determined that there are no cultural or biological methods available to eradicate OFF. The CDFA will employ chemical control as the primary tool, and will additionally use physical control via host fruit removal when there is evidence that a breeding population exists on a property.

The treatment plan for the OFF infestation will be implemented as follows:

- The male attractant technique (MAT) will be used to eliminate all sexually-mature male OFFs. MAT applies small bait stations using STATIC™ Spinosad ME, which is a pre-mixed solution containing the attractant methyl eugenol and an organically registered pesticide spinosad, mixed into a waxy time-release matrix (SPLAT®). The methyl eugenol lures male flies to the bait stations, where the flies ingest the insecticide as they feed. The flies are killed when they feed at the stations. In each square mile within the eradication boundary, a targeted density of 600 evenly spaced five- to ten-milliliter bait stations are applied to utility poles, street trees, and other unpainted surfaces using pressurized tree marking guns mounted on specially modified trucks. The bait stations are placed six to eight feet above the ground. The size of the eradication area is defined as that area within 1.5 miles of each detection site, squared off to create a nine-square mile block, and adjusted to use existing features as boundaries, such as roads. Applications are repeated every two weeks for one life cycle if no quarantine is triggered (typically two to three months), and for two life cycles if a quarantine is triggered (typically four to six months). Life cycle durations are dependent on temperature.
- If evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults are detected), foliar bait treatments may be used

within 200 meters of each detection site in order to mitigate the spread of OFF by eliminating those adult life stages not directly affected by MAT (i.e., females and sexually immature males). Foliar bait ground treatments are a protein bait spray that contains an organic formulation of the pesticide spinosad (GF-120 NF Naturalyte® Fruit Fly Bait), and are repeated every seven to 14 days for one life cycle of the fly (typically two to three months, dependent on temperature). Please visit the CDFA website to learn more about the treatment process at <http://www.cdfa.ca.gov/plant/videos/spinosad/>.

- If evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults), all host fruit from each detection site and all properties within a minimum of 100 meters of each detection site may be removed and disposed of in a landfill in accordance with regulatory protocols. Fruit removal will occur once at the beginning of the project, but may be repeated if additional flies are detected.

Public Notification:

Any resident whose property will be treated via foliar bait sprays or host fruit removal will be notified in writing at least 48 hours in advance of any treatment, in accordance with FAC Section 5779. Following the treatment, completion notices are left with the residents detailing precautions to take and post-harvest intervals applicable to any fruit on the property. For MAT applications in public areas, notification is given to the general public via mass media outlets such as newspapers or press releases, and information is posted on the CDFA website at http://www.cdfa.ca.gov/plant/PDEP/treatment/oriental_ff.html. Information concerning the OFF project will be conveyed directly to concerned local and State political representatives and authorities via letters, emails, and/or faxes. Press releases, if issued, are prepared by the CDFA information officer and the county agricultural commissioner, in close coordination with the project leader responsible for treatment. Either the county agricultural commissioner or the public information officer serves as the primary contact to the media.

For any questions related to this program, please contact the CDFA toll-free telephone number at 800-491-1899 for assistance. This telephone number is also listed on all treatment notices.

Enclosed are the findings regarding the treatment plan, a map of the treatment area, work plan, and an integrated pest management analysis.

FINDINGS REGARDING A TREATMENT PLAN FOR THE ORIENTAL FRUIT FLY

Between September 29 and December 14, 2016, four male and one female oriental fruit flies (OFFs), *Bactrocera dorsalis* (Hendel) group, were trapped in the communities of San Pedro and Wilmington, Los Angeles County. Based on the survey data, pest biology, information from the California Department of Food and Agriculture (CDFA) *Bactrocera* Science Advisory Panel (BacSAP), recommendations provided to me by the CDFA Primary State Entomologist, and the CDFA "Action Plan for Methyl Eugenol Attracted Fruit Flies including Oriental Fruit Fly *Bactrocera dorsalis* (Hendel)," I have determined that an infestation of OFF exists in the area.

The OFF is an exotic insect originating in Asia, and has been accidentally introduced into a number of Pacific Islands, including Hawaii. It is a member of a closely related group of species, known as the OFF group, which are difficult to distinguish based on individual specimens. Several of the group species are major fruit and vegetable pests, and collectively members of the OFF group are known to attack over 230 types of fruits and vegetables. Important California crops at risk include pome and stone fruits, citrus, dates, avocados, and many vegetables, particularly tomatoes and peppers. Damage occurs when the female lays eggs in the fruit. These eggs hatch into larvae, which tunnel through the flesh of the fruit, making it unfit for consumption. This pest presents a major threat to a wide variety of California produce, with the combined 2012 gross value of these commodities of over \$15.2 billion. The permanent establishment and spread of this pest would result in increased production and postharvest costs to safeguard commercial fruit from infestation, increased pesticide applications on both production agriculture and residential properties to mitigate damage, and lost economic activity and jobs from trade restrictions imposed by the United States Department of Agriculture (USDA) and foreign trade partners.

This decision to proceed with treatment is based upon a realistic evaluation that it will be possible to eliminate OFF from this area and prevent its spread using currently available technology in a manner that is based on an action plan developed in consultation with the Pest Prevention Committee of the California Agricultural Commissioners and Sealers Association, the USDA, and scientists on the BacSAP. Due to the size of the infested area and the number of flies detected, historical data indicates that eradication is possible. The first California OFF detections occurred in Orange and Santa Barbara counties in 1960, and since that time, multiple re-introductions have been delimited and successfully eradicated. In making this decision, the CDFA has evaluated possible treatment methods. In accordance with integrated pest management principles, the following is the list of options that I have considered for the treatment of this OFF infestation: 1) physical controls; 2) cultural controls; 3) biological controls; and 4) chemical controls.

Based upon input from my professional staff and outside experts familiar with OFF, I have concluded that there are no cultural or biological control methods that are effective to treat the OFF that allow the CDFA to meet its statutory obligations. To eradicate OFF, I am ordering that male attractant treatments, consisting of methyl eugenol, a pesticide (spinosad), and a time-release matrix be applied to utility poles and street trees to eliminate this infestation. Additionally, in the event of evidence of a breeding population on a property, foliar bait spray treatments will be applied to host trees using ground-based equipment and host fruit removal will occur. Descriptions of these options are below. The options selected are a chemical-control measure that involves the use of insecticides targeting the adult stage and a physical-control measure targeting the eggs and larvae. These options were selected based upon biological effectiveness, minimal public intrusiveness, cost, and minimal impacts to the environment.

A Program Environmental Impact Report (PEIR) has been prepared which analyzes the OFF treatment program in accordance with Public Resources Code (PRC), Sections 21000 et seq. The PEIR was certified in December 2014, and is available at <http://www.cdfa.ca.gov/plant/peir/>. The PEIR addresses the treatment of the OFF at the program level and provides guidance on future actions against the OFF. It identifies feasible alternatives and possible mitigation measures to be implemented for individual OFF treatment activities. The OFF program has incorporated the mitigation measures and integrated pest management techniques as described in the PEIR. In accordance with PRC Section 21105, this PEIR has been filed with the appropriate local planning agency of all affected cities and counties. No local conditions have been detected which would justify or necessitate preparation of a site specific plan.

Sensitive Areas

The treatment area has been reviewed by consulting the California Department of Fish and Wildlife's California Natural Diversity Database for threatened or endangered species. The CDFA also consults with the United States Fish and Wildlife Service, the National Marine Fisheries Service and the California Department of Fish and Wildlife when rare and endangered species are located within the treatment area. Mitigation measures will be implemented as needed. The CDFA will not apply pesticides to bodies of water or undeveloped areas of native vegetation. All treatment will be applied to residential properties, common areas within residential development, non-agricultural commercial properties, and right-of-ways.

Work Plan

The treatment program area encompasses those portions of Los Angeles County which fall within 1.5 miles around each property on which an OFF has been detected and any subsequent detection sites within the program boundaries. A map of the project boundaries is attached. The work plan consists of the following elements:

1. **Delimitation.** Traps will be placed throughout the project area to delimit the infestation and to monitor post-treatment OFF populations. The cardboard Jackson sticky trap is baited with the attractant methyl eugenol mixed with the pesticide naled (Dibrom® 8 Emulsive), and the McPhail trap is an invaginated glass flask baited with Torula yeast and borax in water. The Jackson trap is strongly attractive to sexually maturing males, while the McPhail trap is attractive to both sexes of the fly. Jackson traps and McPhail traps will each be placed at a density of 25 per square mile within a 0.5-mile radius of each detection site, and Jackson traps will be placed at a density of five per square mile in the remaining delimitation area going out to 4.5 miles from each detection site. Additional traps may be added to further delimit the infestation and to monitor the efficacy of treatments. These traps will be serviced on a regular schedule for a period equal to three OFF generations beyond the date of the last OFF detected. In addition, host fruit may be sampled for the presence of eggs and larvae in a 200-meter radius around each detection property.
2. **Treatment.** Any OFF detections within the original and/or expanded eradication area(s) will be treated according to the following protocol.
 - The male attractant technique (MAT) will be used to eliminate all sexually-mature male OFFs. MAT applies small bait stations using STATIC™ Spinosad ME, which is a pre-mixed solution containing the attractant methyl eugenol and an organically registered

pesticide spinosad, mixed into a waxy time-release matrix (SPLAT®). The methyl eugenol lures male flies to the bait stations, where the flies ingest the insecticide as they feed. The flies are killed when they feed at the stations. In each square mile within the eradication boundary, a targeted density of 600 evenly spaced five- to ten-milliliter bait stations are applied to utility poles, street trees, and other unpainted surfaces using pressurized tree marking guns mounted on specially modified trucks. The bait stations are placed six to eight feet above the ground. The size of the eradication area is defined as that area within 1.5 miles of each detection site, squared off to create a nine-square mile block, and adjusted to use existing features as boundaries, such as roads. Applications are repeated every two weeks for one life cycle if no quarantine is triggered (typically two to three months), and for two life cycles if a quarantine is triggered (typically four to six months). Life cycle durations are dependent on temperature.

- If evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults are detected), foliar bait treatments will be used within 200 meters of each detection site in order to mitigate the spread of OFF by eliminating those adult life stages not directly affected by MAT (i.e., females and sexually-immature males). The foliage of host trees and shrubs within 200 meters of each detection site will be treated with an organic formulation of spinosad bait spray (GF-120 NF Naturalyte® Fruit Fly Bait) using hand spray or hydraulic spray equipment. Treatments are repeated every seven to 14 days for one life cycle of the fly (typically two to three months, dependent on temperature).
- If evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults are detected), all host fruit from each detection site and all properties within a minimum of 100 meters of each detection site will be removed and disposed of in a landfill in accordance with regulatory protocols. Fruit removal will occur once at the beginning of the project, but may be repeated if additional flies are detected.

Public Notification

Any resident whose property will be treated via foliar bait sprays or host fruit removal will be notified in writing at least 48 hours in advance of any treatment, in accordance with FAC Section 5779. Following the treatment, completion notices are left with the residents detailing precautions to take and post-harvest intervals applicable to any fruit on the property. For MAT applications in public areas, notification is given to the general public via mass media outlets such as newspapers or press releases, and information is posted on the CDFA website at http://www.cdfa.ca.gov/plant/PDEP/treatment/oriental_ff.html. Information concerning the OFF project will be conveyed directly to concerned local and State political representatives and authorities via letters, emails, and/or faxes. Press releases, if issued, are prepared by the CDFA information officer and the county agricultural commissioner, in close coordination with the project leader responsible for treatment. Either the county agricultural commissioner or the public information officer serves as the primary contact to the media.

For any questions related to this program, please contact the CDFA toll-free telephone number at 800-491-1899 for assistance. This telephone number is also listed on all treatment notices.

Duty to Act

Under my statutory authority, as Secretary of the California Department of Food and Agriculture, I have decided, based upon the likely environmental and economic damage that would be inflicted by an established infestation of the OFF in this area, that it is incumbent upon me to attempt to address this threat.

My duty to act, and this decision, is based upon authority set forth in Sections 24.5, 401.5, 403, 407, 408, 5401-5405, and 5761-5764 of the FAC, authorizing and mandating the Secretary to: thoroughly investigate the existence of the pest; determine the probability of the pest spreading to other areas; adopt regulations (Title 3 of the California Code of Regulations, Section 3591.2) as are reasonably necessary to carry out the provisions of this code; abate a pest from the established treatment area; and, to prevent further economic damage. The project work plan above describes the CDFA's actions that are necessary to mitigate the effects of this pest.

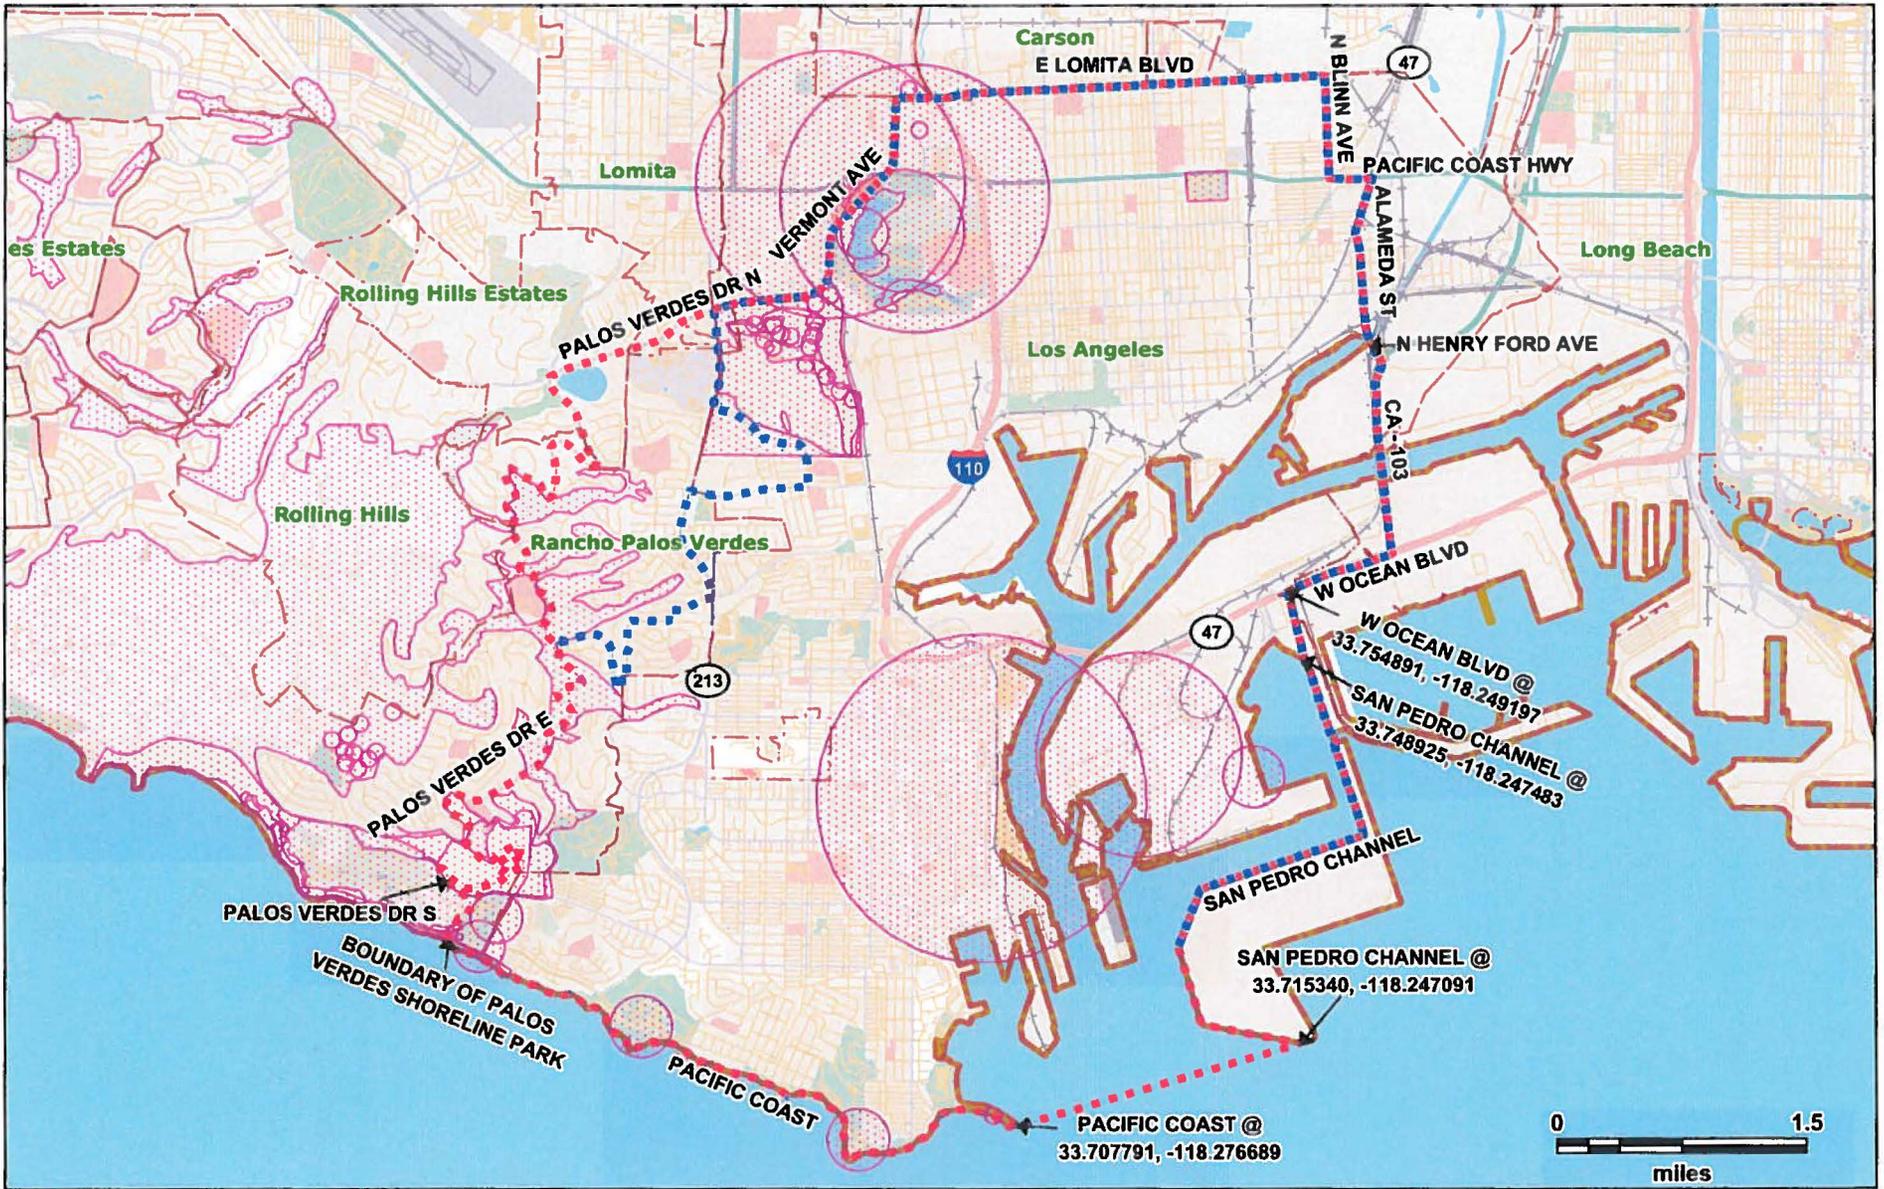

Karen Ross, Secretary

**ERADICATION PROJECT WORK PLAN FOR
METHYL EUGENOL RESPONDING EXOTIC FRUIT FLIES**
(Includes *Bactrocera correcta*, *Bactrocera dorsalis* group, and *Bactrocera zonata*)

DETECTION

1. Detection Trapping

The California Department of Food and Agriculture (CDFA) maintains a cooperative State/County trapping program for the various fruit flies to provide early detection of any infestation in the State. Traps are serviced by either County or State personnel and funded by the Department. The program uses two types of traps: the cardboard Jackson sticky trap baited with the attractant methyl eugenol mixed with the pesticide naled (Dibrom® 8 Emulsive), and the McPhail trap, an invaginated glass flask baited with Torula yeast and borax in water. The Jackson trap is strongly attractive to sexually maturing males, while the McPhail trap is attractive to both sexes of the fly. Traps are hung from branches of host trees at specified densities in susceptible areas of California. County or State employees inspect these traps weekly or bi-weekly throughout the year in southern California and from April or May through October or November in northern California.

2. Intensive Trapping

Intensive trapping is triggered after a single fly is caught. Following confirmation of the specimen, trap densities will be increased over an 81-square mile area centered on the detection. Within the next 24 hours, 25 Jackson and McPhail traps are placed in the square mile core around each find. Five Jackson traps are placed in each mile of the remaining delimitation area. Traps in the core will be checked daily during the first week. Traps in the first buffer zone will be serviced every two days; those in the remainder of the delimitation area are checked at least once during the first week. All traps in the delimitation zone will be checked weekly following a week of negative trap catches. Intensive trapping ends after the third complete life cycle following the last fly find. This time period is determined by a temperature-dependent developmental model run by the Pest Detection/Emergency Projects Branch in Sacramento.

3. Post-Treatment Monitoring

The success of the eradication program is monitored by intensive trapping levels for three life cycles of the fly after the last fly has been detected. If no flies are caught during that time, trap densities return to detection levels.

4. Larval Survey

Fruit on a property where a fly has been trapped may be inspected for possible larval infestation. Small circular oviposition scars are occasionally visible indicating an infested fruit. Fruit on properties adjacent to a trap catch may also be inspected. If two or more flies are trapped close to each other, fruit cutting may be extended to all properties within a 200-meter radius of the finds, concentrating on preferred hosts.

TREATMENT

1. Male Attractant Technique

The male attractant technique (MAT) will be used to eliminate all sexually-mature male OFFs. MAT applies small bait stations using STATIC™ Spinosad ME, which is a pre-mixed solution containing the attractant methyl eugenol and an organically registered pesticide spinosad, mixed into a waxy time-release matrix (SPLAT®). The methyl eugenol lures male flies to the bait stations, where the flies ingest the insecticide as they feed. The flies are killed when they feed at the stations. In each square mile within the eradication boundary, a targeted density of 600 evenly spaced five- to ten-milliliter bait stations are applied to utility poles, street trees, and other unpainted surfaces using pressurized tree marking guns mounted on specially modified trucks. The bait stations are placed six to eight feet above the ground. The size of the eradication area is defined as that area within 1.5 miles of each detection site, squared off to create a nine-square mile block, and adjusted to use existing features as boundaries, such as roads. Applications are repeated every two weeks for one life cycle if no quarantine is triggered (typically two to three months), and for two life cycles if a quarantine is triggered (typically four to six months). Life cycle durations are dependent on temperature.

2. Foliar Sprays

If evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults are detected), the foliage of host trees and shrubs within 200 meters of each detection site will be treated with an organic formulation of spinosad bait spray (GF-120 NF Naturalyte® Fruit Fly Bait) using hand spray or hydraulic spray equipment. Following treatment, completion notices are left with the homeowners detailing precautions to take and post-harvest intervals applicable to any fruit on the property. Treatments are repeated at seven to 14 day intervals for one life cycle of the fly (typically two to three months, dependent on temperature).

3. Host Fruit Removal

If evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults are detected), host removal (fruit stripping) may be used in conjunction with the other treatment options. All host fruit will be removed from all properties within a minimum of a 100-meter radius around the detection sites. The fruit is taken to a landfill for burial using regulatory compliance protocols. Fruit removal will occur once at the beginning of the project, but may be repeated if additional flies are detected.

SENSITIVE AREAS

The treatment area has been reviewed through consultation with the California Department of Fish and Wildlife's California Natural Diversity Database for threatened or endangered species. The CDFA also consults with the California Department of Fish and Wildlife, the U.S. Fish and Wildlife Service and the National Marine Fisheries Services when rare and endangered species are located within the treatment area. Mitigation measures will be implemented as needed. The CDFA will not apply pesticides to bodies of water or undeveloped areas of native vegetation. All treatment will be applied to residential properties, common areas within residential development, non-agricultural commercial properties, and right-of-ways.

PUBLIC NOTIFICATION

Any resident whose property will be treated via foliar bait sprays or host fruit removal will be notified in writing at least 48 hours in advance of any treatment, in accordance with Food and Agricultural Code Sections 5779 and 5401-5404. Following the treatment, completion notices are left with homeowners detailing precautions to take and post-harvest intervals applicable to any fruit on the property. For MAT applications in public areas, notification is given to the general public via mass media outlets such as newspapers or press releases, and information is posted on the CDFA website at <http://www.cdfa.ca.gov/plant/pdep/treatment/>. Information concerning the project will be conveyed directly to concerned local and State political representatives and authorities via letters, emails, and/or faxes. Press releases, if issued, are prepared by the CDFA information officer and the county agricultural commissioner, in close coordination with the project leader responsible for treatment. Either the county agricultural commissioner or the public information officer serves as the primary contact to the media.

**INTEGRATED PEST MANAGEMENT ANALYSIS OF ALTERNATIVE TREATMENT
METHODS TO ERADICATE METHYL EUGENOL RESPONDING EXOTIC FRUIT FLIES
October 2016**

The treatment program used by the California Department of Food and Agriculture (CDFA) for control of methyl eugenol responding exotic fruit flies (MEREFFs) employs an area-wide chemical treatment called male attractant technique, complemented with a targeted foliar bait spray treatment using an organic pesticide and with fruit removal, as needed.

Below is an evaluation of alternatives treatment methods for MEREFFs which have been considered for eradication programs in California. These flies include, but are not limited to, the oriental fruit fly (*Bactrocera dorsalis*) (OFF) and its sibling species (collectively referred to as *Bactrocera dorsalis* group) (OFF group), guava fruit fly (*Bactrocera correcta*) (GFF), and peach fruit fly (*Bactrocera zonata*) (PFF).

A. PHYSICAL CONTROL

Mass Trapping. This method involves placing a high density of traps in an area in an attempt to physically remove the adults before they can reproduce. For MEREFFs, trapping is considerably enhanced when an insecticide is added to the lure to help capture adults. Mass trapping with lure only and without an insecticide, would capture some adult OFF, but would not eradicate an infestation.

Active Fly Removal. Adult flies are mobile daytime fliers, and adults could theoretically be netted or collected off of foliage. However, due to their ability to fly when disturbed, and the laborious and time prohibitive task of collecting flying insects from several properties by hand, it would be highly improbable that all of the adults could be captured and removed. Larvae live inside the fruit, so all potentially infested fruit in the entirety of the eradication area would have to be removed and disposed of in order to eliminate the larvae from the environment. For these reasons, active fly removal is not considered to be an effective alternative.

Fruit Bagging. Fruit bagging involves individually enclosing each developing fruit in a bag which prevents fruit flies from laying eggs. In order to be effective, frequent monitoring of the bagged fruit is needed to identify and repair damage to the bags before female flies can enter and lay eggs. Fruit bagging is considered an economically inefficient option for area-wide treatment because it is so labor intensive. It is also intrusive to residents, who may oppose having their home grown produce confined inside bags. Additionally, this method may possibly promote the dispersal of female flies in search of egg laying sites, thus spreading the infestation if other treatments are not used outside the fruit bagging area. For these reasons, fruit bagging is not considered to be an effective alternative.

Host Fruit Removal. Removal of host fruits involves the physical removal of all suitable fruit from both the host plant and from the surrounding ground, in order to eliminate developing eggs and larvae. The fruit is collected and double-bagged before being buried in a landfill. California's MEREFF program performs host fruit removal within a 100-meter radius of detection sites which are indicative of an active breeding area, such as those with immature stages, a mated female, or multiple adults, as an added measure to reduce populations within that area and to prevent spread of adult life stages which are not targeted under the preferred area-wide treatment of male attractant technique, such as sexually immature males and females. Fruit removal is not considered an economically inefficient option for area-wide treatment because it is so labor intensive. It is also intrusive to residents, who may oppose losing their home grown

produce. Additionally, this method may possibly promote the dispersal of female flies in search of egg laying sites, thus spreading the infestation if other treatments are not used outside the fruit removal area. For these reasons, fruit removal is most useful as a complimentary treatment to one or more other treatments.

Host Plant Removal. Removal of host plants involves the large scale destruction of plants by either physical removal or phytotoxic herbicides. Host plant removal is not considered an economically inefficient option for area-wide treatment because it is so labor intensive. It is intrusive to residents, who may oppose losing their plants. Additionally, this method may possibly promote the dispersal of female flies in search of egg laying sites, thus spreading the infestation if other treatments are not used outside the host plant removal area. And finally, because only the fruit becomes infested, there is no need to remove the entire plant during a temporary eradication project as long as the fruit can be removed.

B. CULTURAL CONTROL

Cultural Control. Cultural controls involve the manipulation of cultivation practices to reduce the prevalence of pest populations. These include crop rotation, early harvest (i.e., harvesting green fruit before it is suitable for oviposition), using pest-resistant varieties, and intercropping with pest-repellent plants. None of these options are applicable for MEREFF eradications in an urban environment with multiple hosts, and may only serve to drive the flies outside the treatment area, thus spreading the infestation.

C. BIOLOGICAL CONTROL

Microorganisms. No single-celled microorganisms, such as bacteria, have been shown to be effective at controlling MEREFFs.

Nematodes. No nematodes have been shown to be effective at controlling MEREFFs.

Parasites and Predators. Parasites and predators are not considered an effective stand alone eradication method because their success is density dependent; they are more effective against dense prey populations than against light populations, so their effectiveness decreases as the prey populations decline. Although several organisms, such as parasitic wasps, have been investigated as potential biological control agents against exotic fruit fly species, they have only been used in suppression programs and not in eradication programs. Since there is insufficient research documenting their efficacy in an eradication program, using these organisms could lead to the ineffectiveness of the program.

Sterile Insect Technique (SIT). SIT is currently used to suppress OFF and GFF populations in mango orchards in Thailand, and research is ongoing for use against OFF in Hawaii and against a member of the OFF complex, *Bactrocera philippinensis*, in the Philippines. However, there are no production-level colonies of these species outside of Thailand, and these facilities and research colonies are too small and too far away to support an active eradication effort in California. In addition, for introduced populations of the OFF complex, there is uncertainty as to which species has actually invaded, and therefore SIT using the wrong species could lead to ineffectiveness of the program.

D. CHEMICAL CONTROL

Male Attractant Technique. The use of male attractant technique (MAT) (formerly male annihilation technique) in California can be traced back to the 1960's. MAT applies small bait stations using STATIC™ Spinosad ME, which is a pre-mixed solution containing the attractant methyl eugenol and an organically registered pesticide spinosad, mixed into a waxy time-release matrix (SPLAT®). The methyl eugenol lures male flies to the bait stations, where the flies ingest the insecticide as they feed. The flies are killed when they feed at the stations. In each square mile within the eradication boundary, a targeted density of 600 evenly spaced five- to ten-milliliter bait stations are applied to utility poles, street trees, and other unpainted surfaces using pressurized tree marking guns mounted on specially modified trucks. The bait stations are placed six to eight feet above the ground. The size of the eradication area is defined as that area within 1.5 miles of each detection site, squared off to create a nine-square mile block, and adjusted to use existing features as boundaries, such as roads. Applications are repeated every two weeks for one life cycle if no quarantine is triggered (typically two to three months), and for two life cycles if a quarantine is triggered (typically four to six months). Life cycle durations are dependent on temperature. Sexually maturing males are strongly attracted to methyl eugenol because it is needed for proper production of their sex pheromone. The male flies responding to the methyl eugenol die from the pesticide when they feed at the stations. In each square mile within the eradication boundary, a targeted density of 600 evenly spaced five milliliter bait stations are applied to utility poles, street trees, and other unpainted surfaces using pressurized tree marking guns mounted on specially modified trucks. The bait stations are placed six to eight feet above the ground. The size of the eradication area is defined as that area within 1.5 miles of each detection site, and squared off to create a nine square mile block, and adjusted to use existing features as boundaries, such as roads. Applications are repeated every two weeks for one life cycle if no quarantine is triggered (typically two to three months), and for two life cycles if a quarantine is triggered (typically four to six months). Life cycle durations are dependent on temperature.

Foliar Bait Treatment. Foliar bait treatments use an insecticide mixed with a food attractant in order to kill adults, particularly females. The bait makes the treatment selective for flies, and therefore biological control agents for other pests are not affected. The CDFA uses this treatment if evidence that a breeding population exists on a property (i.e., immature stages, mated female, or multiple adults are detected). The goal is to decrease the population density and to target adult life stages which are not susceptible to MAT (e.g., mated females, sexually immature males) in order to contain the population while MAT drives the population to extinction. The foliage of host trees and shrubs within 200 meters of each detection site is treated with an organic formulation of spinosad bait spray (GF-120 NF Naturalyte® Fruit Fly Bait) using hand spray or hydraulic spray equipment. This treatment is repeated at seven to 14 day intervals for one life cycle beyond the last fly detected. While effective in the area treated, this type of treatment is considered economically inefficient to apply in a biologically relevant timeframe over the entirety of the eradication area, so it is used as a complimentary treatment to MAT rather than a standalone treatment.

Foliar Cover Spray Treatment. Foliar cover spray treatments use a contact insecticide in order to kill adults. This treatment is non-selective and will affect any insects which come into contact with it, including biological control agents for other pests. In order to sufficiently cover an area, much more pesticide must be applied per area than with foliar bait sprays. For these reasons, cover sprays are not used for this program.

Soil Treatment. Contact insecticides drenched into the soil have been used against MEREFFs in the past. The goal is to directly kill larvae entering the soil to pupate, pupae in the soil, and adults emerging from pupae by drenching the soil surrounding host plants. The insecticide previously used for this purpose contains the organophosphate insecticide diazinon. However, this treatment has not been used since 2001 in California because of its environmental toxicity, difficulty in removing all ground clutter and debris, and a potential lack of effectiveness in the varied soil types found in urban environments.

PEST PROFILE

Common Name: Oriental Fruit Fly

Scientific Name: *Bactrocera dorsalis* (Hendel)

Order and Family: Diptera, Tephritidae

Description: The adult oriental fruit fly (OFF) is somewhat larger than a housefly, about eight millimeters in length. The top of the thorax is mostly black with yellow patches, the abdomen is yellow-orange with a dark T-shaped mark, and the face has two black spots. The wings are clear with a dark line along the front edge. The female has a pointed slender ovipositor to deposit eggs under the skin of host fruit. The egg is minute, white, cylindrical, rounded at the ends and about six times as long as wide. The larva is creamy-white, legless, and may attain a length of ten millimeters. The pupa is encased in a dark brown cylindrical puparium.

History and Economic Importance: The OFF is an exotic insect originating in Asia, and has been accidentally introduced into a number of Pacific Islands, including Hawaii. It is a member of a closely related group of species, known as the OFF complex, which are difficult to distinguish based on individual specimens. Several of the complex species are major fruit and vegetable pests, and collectively members of the OFF complex are known to attack over 230 types of fruits and vegetables. Important California crops at risk include pome and stone fruits, citrus, dates, avocados, and many vegetables, particularly tomatoes and peppers. Damage occurs when the female lays eggs in the fruit. These eggs hatch into larvae, which tunnel through the flesh of the fruit, making it unfit for consumption. The first California detections occurred in Orange and Santa Barbara counties in 1960, and since that time, numerous re-introductions have been delimited and successfully eradicated.

Distribution: OFF is widespread through much of the mainland of southern Asia and neighboring islands, including Sri Lanka and Taiwan. Distribution in the United States is restricted to the Hawaiian Islands.

Life Cycle: Females lay eggs in groups of three to 30 under the skin of host fruits, and a single female can lay more than 1,000 eggs in her lifetime. The amount of time it takes for egg development depends on the ambient temperature. Larvae tunnel through the fruit feeding on the pulp, shed their skins twice, and emerge through exit holes in approximately ten days. The larvae drop from the fruit and burrow two to three centimeters into the soil to pupate. In ten to twelve days, adults emerge from these puparia. The newly emerged adult females need eight to twelve days to mature sexually prior to egg-laying. Breeding is continuous, with several annual generations. Adults live an average of 90 days, feeding on honeydew, decaying fruit, plant nectar, bird dung, and other sources of protein. The adult is a strong flyer, recorded to travel 30 miles in search of food and egg laying sites. This ability to fly long distances allows the fly to infest new areas very quickly.

Hosts and Damage: In excess of 230 fruits and vegetables have been reported as hosts of members of the OFF complex (see Partial Host List below). Fruit that has been attacked may be unfit for consumption due to the larvae tunneling through the flesh as they feed. Decay-producing organisms then enter, leaving the interior of the fruit a rotten mass.

Partial Host List

Common Name

Akia
Alexander laurel
Apple
Apricot
Avocado
Banana

Banana, dwarf
Barbados cherry
Bell pepper
Brazil cherry
Breadfruit
Caimitillo
Cashew
Cactus
Cherimoya
Cherry, Catalina
Cherry, Portuguese
Cherry, sweet
Chili
Coffee, Arabian
Country gooseberry
Cucumber
Custard apple
Date palm
Dragon tree
Eggfruit tree
Elengi tree
Fig
Gourka
Granadilla, sweet
Granadilla, yellow
Grape
Grapefruit
Guava

Imbu
Jackfruit
Jerusalem cherry
Kitebilla
Kumquat
Laurel
Lemon
Lime
Longan
Loquat
Lychee nut
Malay apple
Mammee apple
Mandarin orange (tangerine)

Scientific Name

Wikstroemia phylluraefolia
Calophyllum inophyllum
Malus sylvestris
Prunus armeniaca
Persea americana
Musa paradisiaca var. *sapientum*
(*Musa x paradisiaca*)
Musa nana
Malpighia glabra
Capsicum frutescens grossum
Eugenia dombeyi
Artocarpus altilis
Chrysophyllum oliviforme
Anacardium occidentale
Cereus coerulescens
Annona cherimola
Prunus ilicifolia
Prunus lusitanica
Prunus avium
Capsicum frutescens var. *longum*

CITY OF RANCHO PALOS VERDES
OFFICIAL NEWS RELEASE

FOR IMMEDIATE RELEASE

JANUARY 3, 2017

CONTACT: CITY CLERK'S OFFICE

TELEPHONE NUMBER: 310 544-5217

E-MAIL: CITYCLERK@RPVCA.GOV

**RECRUITMENT FOR THREE VACANCIES ON THE CITY OF RANCHO PALOS VERDES
TRAFFIC SAFETY COMMITTEE**

Traffic Safety Committee

The five member Traffic Safety Committee serves as a public forum for traffic related issues including placement of traffic control devices, consideration of traffic calming solutions, safety-related tools and posted speed limits. The 2016-2017 work plan for the Traffic Safety Committee includes providing civic engagement opportunities to discuss school safety matters, safe school routes, crossing guards and crosswalks. The Committee will also provide comments and recommendations to the City Council regarding the Circulation Element of the General Plan Update, permit parking in coastal zones and roadway safety relating to multi-modal use of the public rights-of-way. The Traffic Safety Committee generally meets on the 4th Monday, every-other month at 7:00 p.m. in the Community Room at City Hall.

Those interested in applying must submit an application to the City Clerk's Office by 4:30 p.m. on Friday, January 27, 2017. To be considered for appointment, an applicant must be a resident of the City of Rancho Palos Verdes. An application for appointment can be requested from the City Clerk's Office, City Hall, 30940 Hawthorne Boulevard, Rancho Palos Verdes, CA 90275, telephone number (310) 544-5217 or is available on the City's website at the following web address:

<http://www.rpvca.gov/150/Advisory-Board-Recruitment>

Interviews with the City Council are anticipated to take place in February 2017 prior to a regularly scheduled City Council Meeting. The City Clerk's Office will confirm the date and time of the interviews with the applicants.

-END-

**COMMUNITY DEVELOPMENT
DEPARTMENT****IMMATERIAL AMENDMENT
TO COASTAL DEVELOPMENT PERMIT**

December 21, 2016

Coastal Development Permit Amendment No. A-5-RPV-93-005-A24

Original Permit Number: A-5-RPV-93-005

Issued to: **Zuckerman Building Company; Palos Verdes Land Holdings Company; (Ocean Trails LP); current owner and applicant VH Property Corp.**for: **83-lots single family residential and 18 hole golf course with a club house and related facilities etc....**at: **One Ocean Trails Drive, South of Palos Verdes Dr., between the Portugese Bend Club and the West Shoreline Park. APN(s): 75640210003, 75640210004, 75640210006)**

...has been amended to include the following change(s):

Carry out 66,720 square feet of restoration and mitigation of coastal sage scrub as identified in Habitat Restoration Exhibit dated October 2016. Restoration shall be consistent with the terms of Habitat Enhancement Plan dated February 18, 1993, shall be consistent with the Habitat Management Plan referenced in Special Condition 6 of Coastal Development Permit A-5-RPV-93-005, and plant palette shall be consistent with the most recent update to the Habitat Conservation Plan referenced in Special Condition 8, identified in the 2007 Annual Monitoring Report dated April 2008.

This amendment was determined by the Executive Director to be immaterial, was duly noticed, and no objections were received. Please note that the original permit conditions unaffected by this amendment are still in effect.

Sincerely,

John Ainsworth
Acting Executive Director

Here's where the Rancho Palos Verdes peacocks have gone

By Mary Jo Hazard

Saturday, December 24, 2016

Ana Pozza knows. Check out her Instagram account and you can watch 30 of the birds strutting around her 269-acre rescue ranch in Ventura County.

“There’s nothing like coming home in a bad mood and seeing a momma and her babies walking across the road,” Pozza said. “They don’t have a clock; they take their time crossing the road, and you have to stop and enjoy. It’s unbelievable.”

The peacocks moved to Pozza’s property after the Rancho Palos Verdes City Council in August 2015 approved an annual trapping and relocation of 150 peafowl in five designated areas: Portuguese Bend area, Sunnyside Ridge, Crestridge, Grandview and Vista Grande.

The city contracted with Mike Maxcy, owner and operator of Wildlife Services, to remove and find appropriate homes for the birds. Maxcy had successfully trapped and relocated 70 peafowl for the city in 2009 and 2010.

This year’s trapping program began in mid-July and Maxcy has moved 99 more birds out of the area. In March 2017, another peacock census will be taken to determine if more trapping is necessary.

Rancho Palos Verdes residents have mixed feelings about the peacock trapping — not everyone agrees with the City Council on the issue. Some residents like the birds and think that trapping them is inhumane. They fear the birds are euthanized.

Good homes found

Maxcy has repeatedly reassured residents that the peacocks are relocated to safe homes and are not euthanized.

“Taking the peacocks from areas where they aren’t wanted and placing them where they’re prized is the best part of my job,” he said, adding that owners of wineries, monasteries and ranches call him regularly to replenish their flocks, and he’s never had a problem finding appropriate placements.

Ellen Brokaw’s 700-acre Brokaw Nursery in Ventura County produces and sells over 250,000 citrus and avocado plants a year in California and exports to 45 countries worldwide. She adopted 28 peacocks from Rancho Palos Verdes.

Brokaw has been a peacock aficionado since her youngest daughter requested a pair of peacocks when she was 8-years-old. The peacocks multiplied, and soon the Brokaws had 30 peacocks on their property.

“But over time, my husband and I developed most of the ranch into a citrus and avocado nursery,” Brokaw said. “The peahens nested on the ground, and without the protection of the chaparral, the coyotes, hawks and owls diminished the population. Some of the males departed during mating season, and predators picked off a few more. Three years ago we were down on one bird.”

In 2015, an article in the Daily Breeze about the peacock trapping and relocation in Rancho Palos Verdes piqued Brokaw's interest. “I contacted the City Council requesting some birds,” Brokaw said, “and they got me involved with Mike Maxcy.”

Foster requirements

Maxcy has strict criteria for potential peacock foster parents. Their property must be at least two acres so the birds remain free ranging and be located at least 20 miles away from the Peninsula. They also must have experience working with peafowl, chickens, etc. And it's essential to have large trees where the birds can roost and a coop where the peafowl can be held until they're acclimated to their new surroundings.

“Mike quizzed me a lot,” Brokaw said, adding that she is impressed with how much he cares about the birds.

Maxcy, satisfied that Brokaw's property was a good placement, brought her 14 peafowl. Shortly after he dropped off her birds, another placement didn't work out. Maxcy called Brokaw and she agreed to take another 14. Today, 28 peafowl from Rancho Palos Verdes call Brokaw Nursery home.

“The first peacocks Mike delivered promptly marched off to the lower part of the ranch,” Brokaw said with amusement. “They're nervous at first, but eventually they stay around the parts of the ranch where there are people.”

She gets a kick out of watching the “group of six” that hangs around her place, and she values them, not only for their beauty but for practical reasons too. “They raise a racket if somebody comes in the night,” Brokaw said, “and they keep the rattlesnake population down.”

Still, not everyone on her ranch is a fan. “Some people don't like them,” Brokaw said with a laugh. “There are reasons the birds are unpopular, but I've learned what flowers they don't like; their messes don't bother me and neither does the noise.”

'Let them loose'

Twenty-two miles away in the Simi Valley, Ana Pozza rescues donkeys, emus, feral cats, tortoises and horses. She adopted four RPV peacocks when Maxcy was trapping the birds in 2010. They brought her so much joy that she insisted Maxcy call when he had more birds. Last year, Maxcy needed to place 30 birds and he brought them over.

Pozza kept the birds in an enclosed coup until they were comfortable. “Once they were relaxed and knew where their food was, we let them loose. Two peacocks immediately flew to my neighbor's

property,” she said with a laugh, “and my neighbor enjoyed them so much he begged me to let them stay.”

“So he has two, but I’ll never get rid of the rest,” Pozza said.

Maxcy relocated the remaining birds to two separate ranches in Bakersfield where the flocks are growing. Maxcy’s job is finished — until possibly March when the City Council takes the next census.

Mr. Paul Christman, Building Official
City of Rancho Palos Verdes
Community Development Department
30940 Hawthorn Blvd.
Rancho Palos Verdes, CA 90275-5391

RE: Ordinance #589

Dear Mr. Christman:

This letter is to advise you of our determination regarding the referenced ordinance with express findings received from your agency on November 8, 2016.

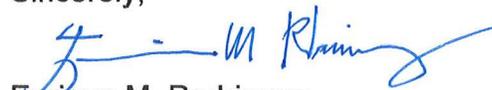

Our review finds the submittal to contain one ordinance No.589 and resolution No. 2016-49 modifying provisions of the 2016 California Building Standards Code in Title 24, California Code of Regulations (code), and express findings complying with Health and Safety Code Sections 17958.7 and 18941.5. The code modifications are accepted for filing and are enforceable. This letter attests only to the satisfaction of the cited law for filing of local code amendment supported by an express finding with the California Building Standards Commission (CBSC). CBSC is not authorized by law to evaluate the merit of the code modification or the express finding.

Local modifications to the code are specific to a particular edition of the code. They must be readopted and filed with CBSC in order to remain in effect when the next triennial edition of the code is published.

On a related matter, should your City of Rancho Palos Verdes receive and ratify Fire Protection District ordinances making modifications to the code, be advised that Health and Safety Code Section 13869.7(c) requires such ratified ordinances and express findings to be filed with the Department of Housing and Community Development, Division of Codes and Standards, State Housing Law Program, rather than CBSC. Also, ordinances making modifications to the energy efficiency standards of the code may require approval from the California Energy Commission pursuant to Public Resources Code Section 25402.1(h)(2).

If you have any questions or need any further information, you may contact me at (916) 263-0916.

Sincerely,

Enrique M. Rodriguez
Associate Construction Analyst
