## Harris & Associates

---

Mr. Donald R. Noble  
Deputy Director of Public Works  
City of Rancho Palos Verdes  
30940 Hawthorne Boulevard  
Rancho Palos Verdes, CA 90275-5391

Program Managers  
Construction Managers  
Civil Engineers

**Subject: Final Report – GASB 34 Compliance Valuation Services**

Dear Mr. Noble:

Transmitted herewith is the Final Report in conjunction with the GASB 34 Compliance Valuation Services.

The information contained in this report presents the findings from our valuation of the City's infrastructure assets as they pertain to the requirements of GASB 34. The Final Report also contains the necessary support documentation and methodologies that were used to develop the historic costs and current net book values. We are confident that the approach and methodologies embodied in this report meet the rigors of GASB 34 and that of your independent auditor.

It has been a real pleasure working with you, Kathryn Downs, the City staff and your auditor, VTD, on this project. Should you need our services in the future, please call me at (800) 827-4901 X536.

Sincerely,

**Harris & Associates**

Ronald D. Creagh  
Program Manager,  
GASB 34 Group Manager

cc: Jeffrey M. Cooper, P.E., Vice President  
Dennis A. Anderson, Project Manager

## SUMMARY OF GASB 34 REQUIREMENTS AND DEADLINES

By release of Statement 34 on June 30, 1999, the Governmental Accounting Standards Board, a national non-profit organization, now requires that states, local governments and other public agencies annually report (full disclosure) the net value of all capital assets, including infrastructure assets, in order to achieve GAAP (generally accepted accounting principles). GASB 34 defines infrastructure assets as "...*long-lived capital assets that are stationary in nature and normally can be preserved for a significantly greater number of years than most capital assets. Examples of infrastructure assets include roads, bridges, tunnels, drainage systems, water and sewer systems, dams and lighting systems...*" In addition, land is to be valued. Fixed assets (generally building contents, vehicles, furnishings and the like) are not affected by GASB 34, but must be reported under other GAAP requirements.

- Basic Approach:
  - Up-to-date inventories must be accomplished/maintained
  - Original acquisition costs or estimated costs must be applied
  - Depreciation must be applied to historical values
  
- Modified Approach:
  - Up to date inventories must be accomplished/maintained
  - Original acquisition costs or estimated costs must be applied
  - Asset management systems must be put in place and include condition level assessment and setting every three years with costs budgeted to match condition level policies.

GASB 34 requires compliance by certain dates based upon annual revenues of public agencies. The City of Rancho Palos Verdes is what is called a Phase II agency, which had an annual revenue of between \$10 million and \$100 million on July 1, 1999. This requires that the City begin reporting assets for the fiscal year ending June 30, 2003. A four-year "grace/transition period" is allowed for reporting "major general infrastructure assets" under certain conditions. City staff has determined that it wants full compliance for all assets by the June 30, 2002 date.

## PROJECT UNDERSTANDING

### City Guidance and Direction

The City has made decisions and provided directions with respect to approach and methodology for GASB 34 infrastructure valuation and reporting, which include the following:

- ◆ All infrastructure assets will be capitalized and depreciated, rather than using the "modified approach."
- ◆ Straight line depreciation will be used to arrive at Net Book Value.
- ◆ All significant costs associated with infrastructure assets are to be capitalized, **not** including Engineering Design, Construction Management, or other soft costs.
- ◆ All such assets are to be capitalized from date of acquisition or estimated date of acquisition.
- ◆ Reasonable estimation techniques to arrive at estimated acquisition dates historical costs (using standard industry price indexes) for such assets are acceptable.

### Networks and Subsystems

The following are the recommended Networks and Subsystems of Infrastructure Assets to be included in the valuation work:

Network	Subsystem
Wastewater system	Lift Stations
	Lines
	Manholes
Storm Drain System (Storm/Nuisance)	Pipes
	Channels, Culverts and Manholes
	Inlets and Outfalls
Streets/Highways	Arterials
	Local/Residential Streets
	Traffic Signals
	Curb, Gutter, Sidewalk
	Landscape Medians
Buildings	All
Traffic Signals	Controllers
	Poles and Fixtures
	Illuminated Street Name Signs
Park Facilities	Landscaping
	Irrigation
	Trees/Plantings
	Play Equipment
	Parking Lots
Land	All

## SCOPE OF WORK

### Task No. 1: Review Completeness and Adequacy of City Records.

This will involve a preliminary review of City records, including existing inventories, bond records, subdivision and parcel maps, GIS, Capital Improvement Programs and civil improvement plans to determine the extent to which sufficient records exist which contain actual acquisition dates and historical costs on assets. This is necessary to determine their reliability for use and the extent to which estimates of acquisition dates and historical cost need to be used. This will also assist in determining the whether information should be collected and/or estimated on the Network or Subsystem level for which assets. The assumption here is that assets acquired or placed in service prior to July, 1980, to the date of incorporation of the City (1973) will be reported.

### Task No. 2: Inventory and Valuation

#### Step 1. Examine Inventories and City Records:

- A. Use of Existing Inventories/Records: This methodology will be used for all assets.
- B. The examination will include review of GIS, asset management systems, master plans, bond records, engineering information and other documents. These materials will assist in determining the date of acquisition (construction or placed into service), and the data gleaned will serve as the basis for developing historical cost.
- C. Where historical data requires substantial research to complete, we will use statistically representative sampling techniques to arrive at estimates of volume, type and quantities of like assets as well as estimates of asset value using composite costing.

**Step 2. Develop Historical Cost for Infrastructure Assets:** The composite cost method will be used to establish historical cost particularly where original cost cannot be determined. In these situations, replacement value will be determined on a unit cost basis. Unit costs will be applied to appropriate asset in terms of total square footage, linear footage or appropriate unit measurement. The ENR Construction Cost Index will be applied to arrive at estimated historical cost. Straight line depreciation will be applied to the useful life. This will achieve historical cost as well as current Net Book Value, accumulated depreciation, annual depreciation and salvage (or residual value).

The following methodology/approach is to be used:

- A. Inventories will be established based upon an in-depth review and analysis of existing City records (asset locations and quantities will be identified wherever possible).
- B. To the extent that City/County records and/or inventories are reasonably available, asset inventories/valuations will be accomplished on a pre-1980 basis.
- C. Valuations (Net Book Value) will be established on actual acquisition dates and actual historical records, to the extent that these are reasonably available. Estimation of dates and costs should, therefore, be minimized.

- D. Detailed "actual" information will be compiled and then summarized in a format that can assist in managing infrastructure assets.
- E. Information available contained in the GIS/PMS system will be used to value pavements through the composite cost method, and valuation information will be reported using the "Basic Approach" (depreciation) based upon the City PMS condition level index.
- F. Width assumptions will be made to supplement existing GIS/AMS inventory data for curbs, gutters and sidewalks and trails.
- G. Estimates of unit costs for the various assets will be applied based upon asset type using the appropriate unit measurement (such as square footage, linear footage, etc.).
- H. Illuminated street-name sign and traffic signal inventories/records will be reviewed and estimates of value using composite cost estimates will be used to determine value and whether the cumulative value is at the 5% Subsystem level to warrant reporting.
- I. Net book value will be determined by a formula utilizing date of acquisition, historical cost, useful life and a depreciation methodology (in this case, straight line depreciation).

**Step 3. Establish Asset Modules via Microsoft Applications for all Networks/Subsystems:**

These modules will provide the following information: asset description, historical cost, acquisition date, useful life, depreciation, accumulated depreciation and calculations of salvage/residual (Net Book Value) value based upon representative samples. This information will be available in electronic form and will be documented in spreadsheets that appear in the Appendices in the Final Report.

**Step 4. Prepare Summary of Findings:** We view this as a "Draft Final Report" document that can be easily reviewed and understood by City staff and the City's independent auditor. This report will contain, and will be formatted in the following manner:

- A. General Summary: This will consist of a Listing of the Asset categories by Network or Subsystem, with totals of Net Book Value (historical cost less depreciation) for each.
- B. Separate Sections for each Asset: Each Section will include the following:
  - ◆ Asset name, with designated reporting category of Network or Subsystem.
  - ◆ Summary inventory of Asset, identifying major components.
  - ◆ Listing of resources (City records) used to assemble/compile inventory.
  - ◆ Methodology used to determine acquisition dates.
  - ◆ Useful life of each Asset.
  - ◆ Methodology used to determine historical cost (composite cost).
  - ◆ Formula/methodology for applying depreciation (straight line) to determine Net Book Value.

- ◆ Appendices/Spreadsheets documenting Asset components, with historical cost, cost index, useful life, depreciation calculations (accumulated and annual depreciation), salvage/residual value (Net Book Value results).

**Step 5. Review Results with Appropriate City Staff:** We will meet with designated City staff and others (such as the City's auditor) to review and clarify aspects of the "Draft Final Report."

**Step 6. Final Report:** The Final Report will contain all necessary historical cost, useful life and depreciation method information for all identified Assets in the format described in Step 4B (above). All support documentation will be provided electronically and by hard copy. This will allow for prompt and efficient implementation in the City's accounting records and for production of GASB 34 compliant financial statements.

## DETERMINATIONS RELATIVE TO GASB 34 REQUIREMENTS

Recommendations were provided and determinations were made by the City relative to certain GASB 34 requirements and options. They are as follows:

### **Assets to be Reported**

Those Infrastructure Assets listed on Page 3 of this report. It should be noted that there is some variation in the assets reported versus those originally included in the Scope of Work. Pump stations for the storm drainage facilities were originally included; however, no pump stations exist. Parking lots have been included in the category of Park and Recreation Facilities since they serve them, and estimates of overall park development, including lots, are provided. Hiking and equestrian trails have been eliminated as a land asset since these are easements, which are not technically owned by the City. Rather, they are easements for specific use that reversionary rights to abutting property owners. Land was added to the list of assets to be reported. A separate spreadsheet (asset module) was added for the Abalone Cover sewer project in order to report the value of "projects in progress" in keeping with GASB 34 requirements.

### **Reporting Method**

The Basic Approach. This involves establishing the acquisition date, historical cost, useful life and applying a depreciation method to arrive at Net Book Value. The straight line depreciation method is being used for all Infrastructure Assets.

### **GASB 34 Reporting Level**

GASB 34 allows public agencies to report the Net Current Value of assets at the Network, Subsystem or Individual level. The City has determined that it wishes infrastructure assets to be reported at the Subsystem level. As defined by GASB, a Network is composed subsystems and component parts of infrastructure. In the immediate case, historical data has been collected, and in many cases estimated, for Infrastructure Assets at the Subsystem Level. As a result, reporting can be made at either the Subsystem or Network level.

### **Capitalization Policy**

GASB 34 requires public agencies to establish and disclose the "capitalization policy" for capital and infrastructure assets. It sets forth the dollar value above which such assets acquisitions are added to the capital asset accounts, and below which such assets acquisitions are not required to be reported. The recommended dollar value is \$100,000, which was accepted during discussions with the City staff. It recognizes the significantly higher value of infrastructure as opposed to "fixed assets" (typically building contents). This seemingly high value threshold does not mean that individual assets below this level have not been, and will not be, counted. As reflected in the attached inventory and valuation information, individual and subsystem components have and will continue to be counted below the \$100,000 threshold value.

### **Useful Life of Infrastructure Assets**

Use of the Basic Approach of valuing capital assets requires a determination of useful life of each type of asset in order to properly complete the formula for determining depreciation and arriving at Net Book Value. Based upon our firm's experience, utilization of industry standards,

and consideration of conditions unique to the City, the following have been determined to be the useful life of the relevant Infrastructure Assets:

Roadway Network/Subsystem	Useful Life in Years
1.1 Pavement	
a. Asphaltic Concrete	30
b. Portland Cement Concrete	50
1.2 Curb, Gutter, Sidewalk, Medians	
a. With Trees	10
b. Without Trees	100
1.3 Traffic Signals	25
1.4 Medians	
a. With Trees	10
b. Without Trees	100
<b>Wastewater System</b>	
2.1 PVC Pipelines	50
2.2 VCP Pipelines	25
2.3 Manholes	30
2.4 Lift Stations	25
<b>Storm Drain System</b>	
3.1 Conc. Channels, Culverts, Pipes	100
3.2 CMP Pipes	20
3.3 RCP Pipes	50
3.4 Concrete Inlets and Outfalls	100
<b>Buildings</b>	
4.1 Buildings (all)	50
<b>Parks and Recreation Network</b>	
5.1 Major Park Facilities, including Parking Lots	40
Land	Not Depreciated

### Valuation Methodology

In order to supplement data collection and expedite analysis wherever possible, and where information was not reasonably available in files or existing software programs, historical costs were achieved through estimates, and based upon inventory deficiencies, some acquisitions dates were also estimated. This methodology is permissible under GASB 34. Current replacement unit costs (Year 2001) were established for each applicable asset. These unit costs were developed from bid tabulations, industry standard costing documents and project team experience. Devaluation models were created to convert replacement costs to estimated original costs. These models are based on the appropriate *Engineering News Record Cost Index* (as shown in the Appendices). Depreciation models were created to calculate depreciation on assets using the useful life(s) of assets. The "straight line" depreciation method was used on a half-year convention (calculated through June 30, 2001). The formula for determining current Net Book Value is shown below:

$$\left( \frac{\text{Estimated Historical Cost}}{\text{Estimated Useful Life}} = \text{Annual Depreciation} \right) \times \text{Current Age} = \text{Accumulated Depreciation}$$

$$\text{Estimated Historical Cost} - \text{Accumulated Depreciation} = \text{Current Net Book Value}$$

### Valuation of Pre-1980 Infrastructure Assets

GASB 34 allows governments to report the historical or estimated historical cost of Infrastructure Assets that were acquired, reconstructed or significantly improved in fiscal years ending after June 30, 1980 (FY 1980-81). Based upon the City's RFP, and Harris' Scope of Work, records we have examined inventory, acquisition and historical cost data for the purpose of valuing and reporting assets prior to this date. Where appropriate, and where information was available, assets were valued back to the date of City incorporation (1973). The summaries and appendices reflect this information.

### ENR Indexing and Unit Costs

Exhibit "Q" provides a spreadsheet reflecting the ENR (Engineering News Record) Construction Cost Index data which has been used in a number of situations to determine historical value of the assets. In a number of cases, where actual historical cost was not available, replacement value unit costs were applied, and the unit cost was indexed back to the appropriate year of actual/estimated construction.

# City of Rancho Palos Verdes

## Exhibit "B" Asset Value Totals

Exhibit #		Current Replacement Cost	Original Estimated Cost	<i>Revised</i> Current Net Value (thru 6/30/2001)
	<b>Roadways</b>			
C	Pavement	\$96,823,586	\$64,456,537	\$49,274,217
D	Sidewalk	\$14,162,683	\$3,925,324	\$956,217
E	Curb & Gutter	\$42,488,049	\$3,828,446	\$1,255,889
F	Traffic Signals	\$2,074,800	\$889,913	\$636,849
G	Medians	\$2,666,599	\$738,432	\$80,490

M	Outlets	\$516,000	\$142,793	\$103,525
N	Park Improvements	\$14,493,791	\$4,191,673	\$146,150
O	Buildings	Not applicable	\$2,586,804	\$1,701,806
P	Land	Not applicable	\$15,761,115	\$15,761,115
	<b>Totals</b>	<b>\$259,831,712</b>	<b>\$127,881,268</b>	<b>\$88,088,806</b>

### SUMMARY OF FINDINGS

The following will present summary information on the valuation of each Subsystem of Infrastructure Asset for the purpose of reporting in financial statements in accordance with GASB 34 and for use in the City's accounting records. Shown below, and on **Exhibit "B"**, is an overall summary of the current Net Book Value of the infrastructure assets by Subsystem, Network and grand total. Total current Net Book Value of all assets inventoried and valued in this project is: **\$81,775,442**.

	Current Replacement Cost	Original Estimated Cost	Current Net Value (thru 6/30/2001)
<b>Roadways</b>			
Pavement	\$96,823,586	\$64,456,537	\$49,378,638
Sidewalk	\$14,162,683	\$3,925,324	\$956,217
Curb & Gutter	\$42,488,049	\$3,828,446	\$1,255,889
Traffic Signals	\$2,074,800	\$889,913	\$641,349
Medians	\$2,666,599	\$738,432	\$80,490
<b>Sewer</b>			
Sewer	\$53,141,635	\$14,705,907	\$162,847
Manholes Sewer	\$15,934,000	\$4,409,422	\$367,452
Pump Stations	\$1,400,000	\$729,206	\$411,487
Abalone Cove Sewer	\$5,074,965	\$5,074,965	\$5,074,965
<b>Storm Drain</b>			
Storm Drain	\$6,523,605	\$5,186,590	\$4,871,846
Catch Basins	\$2,010,000	\$556,228	\$403,265
Manholes SD	\$268,000	\$74,164	\$6,180
Culverts	\$2,050,000	\$567,297	\$411,291
Inlets	\$204,000	\$56,453	\$40,928
Outlets	\$516,000	\$142,793	\$103,525
Park Improvements	\$14,493,791	\$4,191,673	\$146,150
Buildings	Not applicable	\$2,586,804	\$1,701,806
Land	Not applicable	\$15,761,115	\$15,761,115
<b>Totals</b>	<b>\$259,831,712</b>	<b>\$127,881,268</b>	<b>\$81,775,442</b>

\* These costs and values do **not** reflect Engineering Design, Construction Management, or other Soft Costs.

*Review and apply low*  

*77  
11*

**ROADWAY NETWORK**

**Subsystem: Pavement**

**Reporting Level**

Subsystem, for pavement only.

**Useful Life of Asset**

30 years for asphaltic concrete and 50 years for Portland Concrete Cement based upon industry standards.

**Inventory/Valuation Data Sources**

The City's Pavement System (PMS) and References 1 and 2 on **Exhibit "A"** (References) were used as the basic sources of information for determining the inventory for pavement on streets. Replacement unit costs were estimated by the Harris Design Group and discussed with City staff. The PMS system utilizes a 1950 default date; however, since the City was incorporated in 1973, this date was used.

**Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:**

Current replacement costs were determined to be \$5.10 per square foot for arterial streets and \$3.83 for residential streets. Historical costs were determined by using the Army Corp of Engineers deterioration curve and ENR Construction Cost Index to establish the historical unit cost by year of construction/improvement for every year since 1973. The useful life of 30 years is fairly standard, and it was verified by Harris PMS and Design Group specialists.

**Net Book Value**

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of pavement. The Net Book Value is **\$49,378,638**, which is reflected on **Exhibit "C."** In addition, and based upon the methodologies described above, you will find information in **Exhibit "C"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003. Data and calculations provided in this Exhibit, and the others that follow for each asset subsystem, are the **Asset Modules** referred to in the Scope of Services.

Area (SF)	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
23,497,303	\$96,823,586	\$64,456,537	\$2,148,551	\$15,077,899	\$49,378,638

**Valuations of Pre-1980 Infrastructure Assets:** Pavements were valued back to 1973, which is the year of incorporation of the City. In some cases, pavements are older than that; however, the City "acquired" this asset network when it incorporated. Therefore, the value can only be established at the year of incorporation. This methodology was discussed and approved by the City's auditor.

## ROADWAY NETWORK

### Subsystem: Sidewalks

#### Reporting Level

Subsystem, for sidewalks.

#### Useful Life of Asset

100 years where no street trees exist; 10 years where street trees exist.

#### Inventory/Valuation Data Sources

References 4, 5 and 6 on **Exhibit "A"** (References) were used as the basic source of information for determining the inventory and valuation of sidewalks. Most sidewalk quantities were obtained from Capital Improvement Plans available in the Public Works Department. Where data was not available, it was estimated by using street lengths available in the PMS system as well as the standard width of sidewalk and aerial photographs.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Current replacement costs were determined to be \$4.25 per square foot of sidewalk. This unit cost was indexed (see ENR Construction Cost Index) back to the year (or estimated year) of construction as far back as 1973, as applicable. Based upon Harris' expertise and discussions with City staff, the useful life of sidewalks was determined to be 10 years where street trees exist (root intrusion) and 100 years where no street trees exist.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$956,217**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "D"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Sidewalk Area (SF)	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
3,332,396	\$14,162,683	\$3,925,324	\$273,830	\$2,969,107	\$956,217

**Valuations of Pre-1980 Infrastructure Assets:** The inventory and valuation methodology used for sidewalks, results in values being reported for this asset as far back to 1973—the date of City incorporation. In the case of sidewalks where street trees exist, the useful life is only 10 years. Therefore, reported values only go back 10 years.

**ROADWAY NETWORK**

**Subsystem: Curb and Gutter**

**Reporting Level**

Subsystem, for curb and gutter.

**Useful Life of Asset**

100 years where no street trees exist; 10 years where street trees exist.

**Inventory/Valuation Data Sources**

References 4, 5 and 6 on **Exhibit "A"** (References) were used as the basic source of information for determining the inventory and valuation of curb and gutter. Most sidewalk quantities were obtained from Capital Improvement Plans available in the Public Works Department. Where data was not available, it was estimated by using street lengths available in the PMS system as well as aerial photographs.

**Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:**

Current replacement costs were determined to be \$12.75 per linear foot of curb and gutter. This unit cost was indexed (see ENR Construction Cost Index) back to the year (or estimated year) of construction as far back as 1973, as applicable. Based upon Harris' expertise and discussions with City staff, the useful life of curb and gutter was determined to be 10 years where street trees exist (root intrusion) and 100 years where no street trees exist.

**Net Book Value**

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$1,255,889**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "E"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

C&G Length (LF)	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
1,084,172	\$42,488,049	\$3,828,446	\$226,941	\$2,572,557	\$1,255,889

**Valuations of Pre-1980 Infrastructure Assets:** The inventory and valuation methodology used for curb and gutter, results in values being reported for this asset as far back to 1973—the date of City incorporation. In the case of sidewalks where street trees exist, the useful life is only 10 years. Therefore, reported values only go back 10 years.

## ROADWAY NETWORK

### Subsystem: Traffic Signals

#### Reporting Level

Subsystem, for traffic signals only, which include illuminated street name signs.

#### Useful Life of Asset

25 years, based upon replacement system estimated by the Harris Design Group and reviewed by the Public Works Department.

#### Inventory/Valuation Data Sources

References 11 and 12 were used to determine the quantity, age and location of traffic signals. This information was reviewed and evaluated by City staff.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Current replacement costs were estimated to be \$150,000 for each traffic signal. The construction date and value for one signal was provided by the Public Works Department, and one other signal was identified on existing CIP Plans. The others were given the default date of 1973—the date of City incorporation. The replacement value of signals was indexed back to the appropriate date(s) to arrive at estimated historical cost and then depreciated based upon age to arrive at current Net Book Value.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$641,349**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "F"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Qty	Quantity by % Ownership	Current Replacement Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
20	13.83	\$2,074,800	\$17,798	\$248,564	\$641,349

**Valuations of Pre-1980 Infrastructure Assets:** Eighteen (18) of the traffic signals existed prior to 1980, and were given default dates of 1973—the date of City incorporation. Two other more recently constructed signals were also identified. Of the 20 traffic signals, the City only owns 13.83 traffic signals based on percent ownership as shown in **Exhibit "F"**.

## ROADWAY NETWORK

### Subsystem: Medians

#### Reporting Level

Subsystem, for street medians.

#### Useful Life of Asset

As with curb, gutter and sidewalk assets, street medians with trees planted in them were assigned a 10 year useful life, while medians without trees in them were assigned a useful life of 100 years.

#### Inventory/Valuation Data Sources

References 7 and 8 (aerial photographs) as reflected in **Exhibit "A"** were used to determine the quantity/volume of medians. Median construction dates were determined by reviewing the Capital Improvement Plans in the Public Works Department.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

The current replacement value was determined to be \$4.25 square foot (which is \$1.18 using the ENR Cost Construction Index) back to the appropriate year of construction. For those medians missing construction date information, 1973 was used as the default date.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of pavement. The Net Book Value is **\$80,490**. See **Exhibit "G."** In addition, and based upon the methodologies described above, you will find information in **Exhibit "G"** about asset quantity and replacement values.

Total Area	Current Replacement Value	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
627,435	\$2,666,599	\$738,432	\$63,861	\$657,941	\$80,490

**Valuations of Pre-1980 Infrastructure Assets:** In most cases, the medians were constructed prior to the 1973 incorporation date of the City. Where specific construction dates were missing, this date was used.

## SEWER (WASTEWATER) NETWORK

### Subsystem: Pipelines

#### Reporting Level

Subsystem, for the sewer (wastewater) system.

#### Useful Life of Asset

PVC pipelines—50 years; VCP (clay) pipelines—25 years; Manholes—30 years; Life stations (Structure—25 years; Components—10 years).

*Life?*

#### Inventory/Valuation Data Sources

All sewer quantities and types were obtained from the Los Angeles County Sanitation District (See Reference 16 on **Exhibit "A"**).

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Current replacement cost and useful life were recommended by the Harris Design Group and accepted by the Public Works Department. Unit costs were indexed back to the appropriate year to determine estimated historical cost, then depreciation was applied to achieve Net Book Value. Essentially, all of the pipelines were constructed prior to the City's incorporation in 1973, so this was used as the default date.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$162,847**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "H"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
\$53,141,635	\$14,705,907	\$580,999	\$14,543,059	\$162,847

**Valuations of Pre-1980 Infrastructure Assets:** Essentially all of the sewer pipeline was installed prior to 1980. The default date (City incorporation) of 1973 was used.

## SEWER (WASTEWATER) NETWORK

### Subsystem: Sewer Manholes

#### Reporting Level

Subsystem, for the sewer (wastewater) system.

#### Useful Life of Asset

30 years.

#### Inventory/Valuation Data Sources

All sewer quantities and types were obtained from the Los Angeles County Sanitation District (See Reference 16 on **Exhibit "A"**).

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Current replacement cost and useful life were recommended by the Harris Design Group and accepted by the Public Works Department. Unit costs were indexed back to the appropriate year to determine estimated historical cost, then depreciation was applied to achieve Net Book Value. Essentially, all of the pipelines were constructed prior to the City's incorporation in 1973, so this was used as the default date.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$367,452**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "I"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Qty	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
3976	\$15,934,000	\$4,409,422	\$146,981	\$4,041,971	\$367,452

**Valuations of Pre-1980 Infrastructure Assets:** Essentially all of the manholes were installed prior to 1980. The default date (City incorporation) of 1973 was used.

**SEWER (WASTEWATER) NETWORK**

**Subsystem: Sewer Pump Stations**

**Reporting Level**

Subsystem, for the sewer (wastewater) system.

**Useful Life of Asset**

25 years for Structure; 10 years for components.

**Inventory/Valuation Data Sources**

All sewer quantities and types were obtained from the Los Angeles County Sanitation District (See Reference 16 and 17 on **Exhibit "A"**).

**Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:**

Current replacement cost and useful life were recommended by the Harris Design Group and accepted by the Public Works Department. Unit costs were indexed back to the appropriate year to determine estimated historical cost, then depreciation was applied to achieve Net Book Value.

**Net Book Value**

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$411,487**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "J"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Qty	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
7	\$1,400,000	\$729,206	\$29,168	\$317,719	\$411,487

**Valuations of Pre-1980 Infrastructure Assets:** Estimated construction dates are provided. Some of the lift stations pre-date 1980.

## SEWER (WASTEWATER) NETWORK

### Subsystem: Projects in Progress (Abalone Sewer Project)

#### Reporting Level

Subsystem, for the sewer (wastewater) system.

#### Useful Life of Asset

25-50 years, depending upon components (pipe, manholes, lift stations)

#### Inventory/Valuation Data Sources

All sewer quantities and types were obtained from Harris & Associates Construction Management Division (See Reference 22 on **Exhibit "A"**). Progress payments for various components of construction were totaled for the Abalone Cove Sewer Project. The spreadsheet attached shows the contract amount and the payments to date. The Net Book Value of this City asset is the amount of progress payments made.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

As required by GASB 34, all infrastructure work/projects in progress should be reported. Construction progress payments were totaled for all components of completed work.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$5,074,965**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "K"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Contract	Completed as of 1/31/02
Total Value \$5,433,376	Total \$5,074,965

**Valuations of Pre-1980 Infrastructure Assets:** Estimated construction dates are provided. Some of the lift stations pre-date 1980.

**STORM DRAIN NETWORK**

**Subsystem: Storm Drain Pipeline**

**Reporting Level**

Subsystem, for the storm drain system.

**Useful Life of Asset**

20 years for CMP pipe and 50 years for RCP pipe.

**Inventory/Valuation Data Sources**

All storm drain quantities and types were obtained from the "Storm Drain Master Plan". (See Reference 13, 14 and 15 on **Exhibit "A"**).

**Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:**

Current replacement cost and useful life were recommended by the Harris Design Group and accepted by the Public Works Department. Unit costs were indexed back to the appropriate year to determine estimated historical cost, then depreciation was applied to achieve Net Book Value. Valuation calculations distinguished between the two different pipe types.

**Net Book Value**

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$4,871,846**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "L"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Length	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
24,413	\$6,523,605	\$5,186,590	\$105,788	\$314,744	\$4,871,846

**Valuations of Pre-1980 Infrastructure Assets:** Construction dates reflect both pre and post-1980 installations.

## STORM DRAIN NETWORK

### Subsystem: Catch Basins, Manholes, Culverts, Inlets & Outlets

#### Reporting Level

Subsystem, for the storm drain system.

#### Useful Life of Asset

100 years for catch basins, culverts, inlets & outlets; 30 years for manholes.

#### Inventory/Valuation Data Sources

All storm drain quantities and types were obtained from the "Storm Drain Master Plan". (See Reference 13, 14 and 15 on **Exhibit "A"**).

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Current replacement cost and useful life were recommended by the Harris Design Group and accepted by the Public Works Department. Unit costs were indexed back to the appropriate year to determine estimated historical cost, then depreciation was applied to achieve Net Book Value. Valuation calculations distinguished between the different subsystem asset and material types.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$965,190**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "M"** about asset quantity, historic values, annual depreciation and accumulated depreciation. This information will be helpful as the base data for the City's following CAFR for FY2002-2003.

Type	Total by Type	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
Catch Basins	402	\$2,010,000	\$556,228	\$5,562	\$152,963	\$403,265
Manholes	67	\$268,000	\$74,164	\$2,472	\$67,983	\$6,180
Culverts	82	\$2,050,000	\$567,297	\$5,673	\$156,007	\$411,291
Inlets	51	\$204,000	\$56,453	\$565	\$15,525	\$40,928
Outlets	129	\$516,000	\$142,793	\$1,428	\$39,268	\$103,525
		\$5,048,000	\$1,396,935	\$15,700	\$431,746	\$965,190

**Valuations of Pre-1980 Infrastructure Assets:** Construction dates are essentially 1973—the City's date of incorporation.

## PARKS AND RECREATION NETWORK

### Subsystem: Major Park Facilities

#### Reporting Level

Subsystem, for major park facilities.

#### Useful Life of Asset

25 years

#### Inventory/Valuation Data Sources

Reference 21, the City's Parks Master Plan, included in **Exhibit "A"** (References), was used as the basic source of information for determining the inventory and valuation of major park facilities. Additional information was obtained from the City's General Ledger entries. In addition, City staff and Harris staff were consulted to ascertain information related to estimated replacement costs for park improvements and structures.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

The major park facilities are listed in **Exhibit "N."** These facilities (exclusive of Land) include playground equipment, landscaping/tree materials, tennis courts, other play courts, parking lots, restroom facilities and the like. The useful life of 25 years was established for major park facilities by averaging the estimated useful life of these various components.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset subsystem. The Net Book Value is **\$146,150**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "N"** about asset quantity and replacement values. This information will be helpful as the base data for the City's following CAFR for FY 2002-2003.

Current Age	Current Replacement Cost	Original Estimated Cost	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
<b>Totals</b>	\$14,493,791	\$4,191,673	\$167,667	\$4,045,523	\$146,150

**Valuations of Pre-1980 Infrastructure Assets:** Park improvements included those that were installed prior to July, 1980.

## BUILDINGS NETWORK

### Subsystem: None

#### Reporting Level

Network. This asset category includes individual buildings which comprise the Buildings Network.

#### Useful Life of Asset

50 years

#### Inventory/Valuation Data Sources

Reference 23, the City's General Ledger information, included in **Exhibit "A"** (References), was used as the basic source of information for determining the inventory and valuation of City-owned buildings.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Buildings owned by the City are listed in **Exhibit "0."** These facilities (exclusive of Land) include City Hall, Park and Recreation facilities, utility buildings and sheds. The useful life of 50 years was established. Acquisition dates and costs were obtained from the General Ledger and then depreciation was calculated in order to achieve current Net Book Value.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset network. Values for each individual building are provided. The Net Book Value is **\$1,701,806**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "O"** about asset quantity and building identification. This information will be helpful as the base data for the City's following CAFR for FY 2002-2003.

Purchase Price	Annual Depreciation	Accumulated Depreciation (thru 6/30/2001)	Current Net Value
\$2,586,804	\$51,736	\$884,998	\$1,701,806

**Valuations of Pre-1980 Infrastructure Assets:** Valuations are provided for buildings constructed prior to July, 1980.

## LAND NETWORK

### Subsystem: None

#### Reporting Level

Network. This asset category includes individual properties owned by the City which comprise the Land Network.

#### Useful Life of Asset

Not applicable. In accordance with GASB 34, Land is not depreciated. It is a permanent asset that has an unlimited useful life.

#### Inventory/Valuation Data Sources

Reference 23, the City's General Ledger information, included in **Exhibit "A"** (References), was used as the basic source of information for determining the inventory and valuation of City-owned land.

#### Methodologies Used to Determine Historical Cost, Acquisition Dates, and Values:

Land owned by the City is listed in **Exhibit "P."** Actual historical value (as reflected in the General Ledger) has been reflected without depreciation, in accordance with the provisions of GASB 34.

#### Net Book Value

The figures below provide all the essential information needed for the City's Comprehensive Annual Financial Report (CAFR) and associated financial statements relative to the Net Book Value of this asset network. Values for each individual property are provided. The Net Book Value is **\$15,761,115**. In addition, and based upon the methodologies described above, you will find information in **Exhibit "P"** about asset quantity (acreage), location of property name. This information will be helpful as the base data for the City's following CAFR for FY 2002-2003.

**Valuations of Pre-1980 Infrastructure Assets:** Valuations are provided for land/property acquired prior to July, 1980.

## PROCEDURES FOR CAPTURING FUTURE GASB 34 INFORMATION

**Attachment "R"** provides an essentially generic form and accompanying "administrative instruction," which should be helpful in capturing critical data for reporting of infrastructure assets in the future. This form is proposed to be used by the various City departments and divisions when assets are acquired, constructed or placed into service (and when assets are disposed of or removed/demolished). We have not included in the instructions which City staff members in the organization would complete the matrix, since that is a more internal operational decision. The "instruction" includes when this information should be collected and returned to the Finance Department. Below are some suggestions on timing and other important considerations.

- ◆ These forms should be completed throughout the fiscal year as asset acquisition and dispositions are completed, and not be left for completion at the end of the fiscal year.
- ◆ Information should be collected for both City projects (CIP projects and the like) as well as developer-built and dedicated/donated infrastructure improvements, whether it is parks, streets, etc.
- ◆ If infrastructure improvements are disposed of, eliminated or removed, their value should be deducted from asset value. If such improvements have to be removed or eliminated as a function of constructing new improvements, the value of the portion removed should be deducted, and the value of the improvements constructed should be added to asset value.
- ◆ The most critical pieces of information are the quantities, acquisition dates and costs. Once these forms are completed and submitted to the Administrative Services Department, they should be compiled, categorized into the appropriate subsystems, and totaled. This information can then be entered in the appropriate Asset Module (spreadsheet) for the fiscal year. Once entered, the Asset Module will electronically perform the calculations to update the annual depreciation, accumulated depreciation and Net Book Value.
- ◆ Quantity information can be obtained from as-built drawings, and should be done upon receipt of as-builts. Cost data may be obtained through unit costs, developer information, final invoice data, Council-accepted project totals (in progress work is not counted; improvements must be complete) or other means.
- ◆ In using the Basic Approach (depreciation), there should be a distinction made between routine maintenance costs, which are not reported per GASB 34 vs. replacement, improvement and preservation costs, which should be reported per GASB 34. "Preservation" costs, as the GASB 34 Implementation Guide defines them, are those cost outlays that extend the useful life (assuming normal routine maintenance) of an asset beyond its original estimated useful life. Also, if the capacity or efficiency of an asset has been increased by a cost outlay (such as a road widening or weight capacity), the costs associated with such improvements should be reported.
- ◆ Where appropriate, certain ancillary project costs should also be captured for reporting purposes. These can include design, construction management, fees, transportation and administrative overhead charges.

The City may wish to include all or part of this information in their "instruction" to staff members to assist them in completing the form. Hopefully, this will be helpful to the City. Certainly, the City can modify and/or fine tune the system/form for maximum use and benefit.

### MEMORANDUM

To:

From: \_\_\_\_\_, Finance Director.

Re: **Instructions for Capturing Acquisition and Cost Information for GASB 34**

Date: \_\_\_\_\_

---

#### **Introduction**

The Governmental Accounting Standards Board, is a nationally-recognized non-profit organization which prescribes standards for accounting practices and financial statements for states and local governments. In June, 1999, this board adopted Statement 34 (GASB 34) which requires that these units of government disclose the Net Book Value of capital assets, including Infrastructure Assets. The values of these assets must be reported in annual financial statements. In our case, these statements are included in the City's Comprehensive Annual Financial Report (CAFR).

#### **GASB 34 Requirements and Maintenance Management**

GASB 34 requires that the value of assets be reported using the Basic Approach. This requires that we determine Net Book Value (current) by capturing the actual historical cost of assets (of particular concern are Infrastructure Assets) and the acquisition date (which may be date of construction completion or date placed into service) and then applying a straight line depreciation formula using an estimated useful life. GASB 34 allows agencies to use the "Modified Approach" where asset management systems are being employed; however the City of Rancho Palos Verdes is utilizing the Basic Approach for all Infrastructure Assets. It is critical that accurate cost and acquisition information be collected and recorded for our Infrastructure Assets for the purpose of GASB 34 reporting and to keep our records system up to date for on-going maintenance management.

## Infrastructure Assets

Cost and acquisition data is to be collected and reported for the following Assets:

Network	Subsystem
Wastewater system	Lift Stations
	Pipes
	Manholes
Storm Drain System (Storm/Nuisance)	Pipes
	Channels, Culverts and Manholes
	Inlets and Outfalls
Streets/Highways	Arterials
	Local/Residential Streets
	Curb, Gutter, Sidewalk
	Landscape Medians
Buildings	Public Access Facilities
	Non-Access Facilities
Traffic Signals	Controllers
	Poles and Fixtures
	Illuminated Street Name Signs
Parks	Landscaping
	Irrigation
	Trees/Plantings
	Play Equipment
Land	

### Instructions/Procedures for Capturing Future GASB 34 Information

The attached form ("GASB Infrastructure Inventory Valuation Form") provides a format with which to supply the necessary information. The following includes important guidance on when/how to complete the form.

- ◆ These forms should be completed for Asset information by fiscal year beginning with FY2002-2003, and every fiscal year thereafter until further advised.
- ◆ The forms should be completed throughout the fiscal year as asset acquisitions (such as new construction and replacement construction) occurs, or when dispositions occur (an asset is sold, demolished or removed). This task should not be left until the end of the fiscal year

- ◆ Information should be collected on City-initiated projects (CIP Projects and the like) as well as developer-built and dedicated/donated infrastructure improvements, whether it is parks, streets, signals, etc.
- ◆ Acquisition/improvement dates and costs are needed for physical improvements. These kinds of projects (replacement, improvement and preservation costs) should be distinguished from routine maintenance costs, which are not reported under GASB 34. "Preservation" costs are cost outlays that extend the useful life of an asset (assuming routine maintenance) beyond its original estimated useful life. Also, if the capacity or efficiency of an asset has been increased by a cost outlay (such as a road widening, adding weight capacity or a resurfacing), the costs associated with such improvements should be reported.
- ◆ Please remember that the value of projects in progress should be reported to the extent that they are complete.
- ◆ The most critical pieces of information are quantities, acquisition/disposition dates and costs. Please complete these portions of the form in thorough fashion.
- ◆ Quantity information can be obtained from as-built drawings, bid documents and other related sources. This information should be collected and reported on the form as soon as as-builts are received. Cost data can be obtained through unit costs (if estimating), developer information, Council-accepted project totals, progress payments, final invoices or other means.

It is important that we capture all relevant information and report it. Failure to comply with GASB 34 will result in the City receiving a "qualified" opinion from our independent auditor, and it may have a negative affect our credit/bond rating.

Thank you for your cooperation.
