</table>

## PLANTING NOTES:

1. **Container Size:** The container size is specified in the planting list. Ensure all containers are within the specified size range to prevent over or under-fertilization.

2. **Soil Requirements:** Before planting, the soil should be tested for pH, nutrient content, and moisture requirements. The soil should be amended as necessary to meet the specific needs of each plant.

3. **Watering Schedule:** Establish a regular watering schedule to ensure proper hydration. Water deeply after planting to anchor the roots in the soil.

4. **Sunlight:** Some plants require full sunlight, partial shade, or full shade. Ensure the planting site meets the light requirements of each plant species.

5. **Spacing:** The planting spacing is critical for the health of the plants. Ensure that the required spacing is maintained to allow for proper growth and development.

6. **Maintenance:** Regular maintenance, including pruning, deadheading, and fertilization, is necessary to keep the plants healthy and thriving.

7. **Environment:** Consider the local climate and soil conditions when selecting plants to ensure they are well-suited for the environment.

8. **Supplies:** Ensure that all necessary supplies, such as mulch, fertilizer, and irrigation systems, are available to support the plants throughout their growth cycle.

9. **Planting Techniques:** Follow proper planting techniques for each species, including the depth of planting, the angle of planting, and the placement of the roots.

10. **Checklist:** Maintain a checklist of all plants and their planting dates to keep track of the progress and ensure that all plants are properly installed.

11. **Incorporate Diversity:** Consider incorporating a variety of plant species to create a diverse and aesthetically pleasing landscape.

12. **Protection:** Use protective barriers or covers as needed to protect the plants from pests, diseases, and weather conditions.

13. **Harmonize Colors:** Select plants that harmonize with the existing landscape and complement the colors of the existing vegetation.

14. **Sustainability:** Choose plants that are sustainable and support local wildlife.

15. **Consultation:** Consult with a landscape professional before planting to ensure the best results.
